

Q1 2020: South Africa Construction and Infrastructure Survey

Conditions become increasingly challenging as Covid-19 pandemic grips the economy

- Workloads now falling across the vast majority of sectors
- Twelve-month expectations scaled back sharply over the quarter
- Financial constraints and insufficient demand seen as the biggest factors hampering the market

As the economic impact of the global coronavirus pandemic begins to sink in, the Q1 2020 RICS South Africa Construction and Infrastructure Survey results point to a significant deterioration in conditions across the sector.

Following a largely stable trend reported in Q4, total workloads fell sharply in Q1, with a net balance of -43% of respondents citing a decline. A downbeat picture has emerged across each individual sector, albeit private industrial workloads suffered the worst contraction (net balance -72%), while the pull-back was a little more modest for private residential workloads (net balance -22%).

In terms of infrastructure activity, workloads reportedly fell across the vast majority of categories covered. Road and rail workloads posted particularly sharp declines, with work on harbours and ports also falling noticeable over the survey period. Conversely, workloads were largely steady across the energy and communications sectors in Q1.

Alongside this, a net balance of -51% of survey participants saw overall business enquiries drop over the quarter (down from a reading of -12% previously). Furthermore, companies reportedly reduced headcounts once again, with the pace of decline exceeding that of Q4 in net balance terms. Rounding off a gloomy set of developments during Q1, a net balance of -81% of contributors saw profit margins deteriorate.

Driving these trends, 83% of contributors report that financial constraints are a critical issue holding back market activity, while 75% cite insufficient demand as weighing on the sector. Aside from these factors, a majority of respondents also report that the cost

of materials, competition, along with planning and regulation are all having a negative effect on activity.

Turning to the outlook, twelve-month expectations point to a more stable picture coming through for total workload as the year wears on. That said, outside of the infrastructure sector, workload expectations are slightly negative, while both headcounts and profit margins are still anticipated to decline.

Finally, a net balance of +65% of respondents foresee total construction costs rising at the twelve month horizon, led by an increase in both material and labour inputs. Tender prices are also project to rise, with contributors pencilling in around a 3% increase across both building and civil engineering projects.

Workloads by sector

Information

Construction and Infrastructure Survey

RICS' Asia-Pacific and Middle East Construction and Infrastructure Survey is a quarterly guide to the trends in the construction and infrastructure markets. The report is available from the RICS website www.rics.org/economics along with other surveys covering the housing market, residential lettings, commercial property, construction activity and the rural land market.

Methodology

Survey questionnaires were sent out on 11 March 2020 with responses received until 16 April 2020. Respondents were asked to compare conditions over the latest three months with the previous three months as well as their views as to the outlook. A total of 1323 company responses were received globally. Results are collated at a country level with regional results only reported if a minimum of ten responses received. Responses in Canada were collected in conjunction with the Canadian Institute of Quantity Surveyors. Responses in the United States were collected in conjunction with the Association for the Advancement of Cost Engineering.

Net balance = Proportion of respondents reporting a rise in a variable (e.g. occupier demand) minus those reporting a fall (if 30% reported a rise and 5% reported a fall, the net balance will be 25%). Net balance data can range from -100 to +100.

A positive net balance reading indicates an overall increase while a negative reading indicates an overall decline.
