

See the world and change it

Being an RICS professional means you play a crucial role in shaping our environment - from the Glenfinnan Viaduct in Scotland to the Valleys Regional Park in Wales - RICS Professionals are responsible for measuring, mapping, analysing land, property and construction projects.

Property and construction professionals provide the foundation for infrastructure development, urban planning, environmental conservation, and so much more.

Imagine being part of a profession which is instrumental in keeping the UK as a world leader in sustainable construction practices, disaster management, and the preservation of our amazing natural resources.

So, why go into the property and construction profession?

You get to see the world

RICS professionals are recognised worldwide and with a global shortage of property and construction professionals, you can travel the world while you work to change it for the better.

No two days are the same

Such a diverse profession with no two roles the same, means no two days are the same!

Job satisfaction

Imagine looking at the world around you and knowing you have made it better for future generations.

You have a life outside of work

With incredible flexibility, RICS professionals are able to work to live and not live to work.

You help protect the world around you

Sustainability is at the centre of RICS professional's work - ensuring the best future for planet.

You can be a part of projects that matter

RICS professionals are involved in all aspects of the built environment, so matter how simple or complex the project may appear, RICS professionals are involved at every level.
