Reflecting changes in the home buying and selling process, and feedback from consumers and members, the RICS HomeBuyer Service 2009 has been updated and RICS HomeBuyer Report (HBR) for 2010 is now available. This practice note will give you all the practical guidance you need to deliver the new HBR.

The HBR is a client-facing product designed to extend fee-earning opportunities for surveyors. This edition of the practice note applies to Scotland, while a separate version applies, and is available, for England, Wales, Northern Ireland, Channel Islands and Isle of Man.

Central to the report are colour coded condition ratings. These rankings are an established feature in property condition surveys. It is vital that members are confident with the principles of applying condition ratings to a property, including how to accommodate ‘serious and/or urgent defects’, ‘further investigation’ and ‘normal maintenance’. Members must also be able to identify ‘Risks’ and report them in an appropriate manner. This practice note will explain these principles, along with your professional obligations and practice requirements under the new scheme.

A copy of the new HBR format is included with the practice note, along with the supporting documents for the scheme: ‘Description of the RICS HomeBuyer Service (Scotland)’, which includes the ‘standard terms of engagement’, and Maintenance tips.

Coverage includes:

- Professional obligations
- Requirements and scope of the service
- The contract
- Compiling the report
- The documentation
- The report form
- Checklists
- Definitions of key terms.

For regularly updated information about all RICS Home Surveys products, please visit www.rics.org/homesurveys.

Status of this practice note

Under the terms of UK Practice statement (UKPS) 4.1 in the 6th edition of the RICS Valuation Standards (the ‘Red Book’), surveyors accepting instructions to provide reports under the RICS HomeBuyer Service must comply with the conditions set out in this practice note.

(Note the 7th edition of the Red Book, due for publication in spring 2011, will be restructured so that the terms within UKPS 4.1 will be renumbered and located elsewhere.)

It is necessary to use the specified forms, also described here, without variation. No departure from the specified mandatory elements of the service is permitted.

When an allegation of professional negligence is made against a surveyor, the court is likely to take account of any relevant practice notes in deciding whether or not the surveyor acted with reasonable competence. Failure to comply with this practice note is likely to be judged to be negligent.

In the opinion of RICS, a surveyor conforming fully to the requirements of this practice note should have at least a partial defence to an allegation of negligence by virtue of having followed those requirements.

Those surveyors using the report forms must take out an RICS HomeBuyer Service Copyright Licence, which authorises them to use the RICS HomeBuyer Service material in Scotland.

This practice note applies to Scotland only. A separate version applies, and is available, for England, Wales, Northern Ireland, the Channel Islands and the Isle of Man.
Introduction

The *RICS HomeBuyer Report practice note, Scotland*, comprises the following parts:

- Part A: The practice note
- Part B: The documentation
- Part C: The report form and checklists
- Part D: Appendices.

The practice note includes all the material relating to the RICS HomeBuyer Service, which is referred to in UKPS 4.1 of the current edition of the Red Book.

Standard terminology

Arranged in the following table are the full title, short form and initials of the main elements and documents of the service. These are to be used consistently and in all cases without variation. (See Appendix A for other key terms used throughout this practice note.)

Part A: The practice note

1 Professional obligations

1.1 Compliance

In the interest of maintaining the highest professional standards, every surveyor must comply with the content of this practice note. (See also Appendix B for a checklist of professional obligations.) A surveyor accepting instructions under the RICS HomeBuyer Service (HBS) must be an AssocRICS, MRICS or FRICS member and must fulfil all such commissions in full compliance with the following:

- the practice note (PN);
- the Description of the RICS HomeBuyer Service (Scotland) (DHS) and the standard terms of engagement (STE) that sits within it;
- the RICS HomeBuyer Service Copyright Licence (see subsection 1.7); and
- all guidance published by RICS relating to the inspection and valuation of residential property (see Appendix C).

The HBS includes a valuation. This must be undertaken in accordance with the RICS Valuation Standards (the ‘Red Book’), as applicable at the time. It will be mandatory from 30 April 2011 for every surveyor producing the RICS HomeBuyer Report (HBR) to be registered with the RICS Valuer Registration Scheme (for further details visit www.rics.org/vrs).

1.2 Care and diligence

The surveyor has a professional duty of care and diligence. The HBS is founded on a set of commitments made to the client in the STE, which sits within the DHS. Both the DHS and STE are reflected throughout this PN and include an obligation to give the client the benefit of the surveyor’s professional advice, opinion and judgment, in addition to the simple facts. They also spell out clearly and unambiguously not only what will be provided in the service, but also what will not.

The surveyor alone must judge the exact extent of the inspection of a particular property and make the decision on whether or not to include particular items in the HBR. The surveyor also has to determine with care which:

(a) matters are to be included for any of the reasons specified in the DHS; and
(b) condition ratings to apply to the elements of the property.

These decisions are made on the basis of the surveyor’s training, knowledge and experience, and the surveyor must be prepared to stand by them.

1.3 Competence

The inspection for the HBS requires an adequate level of competence in surveying the type of property for which the service is suitable. The surveyor should express opinions and advice relating to the condition that can be formed on the basis of the defined level of inspection.

1.4 Sufficient knowledge

Both the DHS and STE indicate that the surveyor has sufficient knowledge of the construction type and the area in which the property is situated. Subsection 2.3 describes the type of property to which the service applies.

The surveyor must be familiar with the characteristics of the local area. Although this varies between regions, this knowledge typically includes:

- common vernacular housing styles, materials and construction techniques;
- environmental issues, including flooding, aircraft noise, radon levels, mining, soil conditions, major areas of potential contamination, etc.;
- the approximate location of the main conservation areas/historic centres;
- local and regional government organisations and structures;
- an awareness of the socio-historical/industrial development in the area; and
- the housing market and property values in the area.

If all this information is not known, the surveyor
must fill in the gaps through research. If this cannot be achieved within an appropriate timescale, the instruction should not be accepted.

1.5 Home Report and Energy Performance Certificate

A Home Report is required for a property being marketed for sale, and it includes an Energy Report, or Energy Performance Certificate (EPC). The EPC contains the current energy-efficiency and the environmental impact ratings for the property. The surveyor is required to transcribe the ratings as they are stated in the EPC in section D of the HBR (see Part C for details on each section of the HBR) if available.

The surveyor is not required to comment in the HBR on the documents or information contained within the EPC or the Home Report.

1.6 Client’s understanding of the contract

The surveyor has a duty to check, before the contract is signed and, where possible, through communication (for example, telephone conversation or email), that the client:

(a) is making the appropriate choice of survey; and
(b) has a clear understanding of the key elements of the service.

In particular, these key elements concern the extent and limitations of both the inspection and the report, as specified in the DHS. (See also section 3 and Appendix D.)

1.7 Obligatory copyright licence

The HBS is a product developed and owned by RICS. Only RICS members (as listed in subsection 1.1) may use its name, format and content. RICS surveyors wishing to reproduce the HBR must purchase an RICS HomeBuyer Service Copyright Licence. The copyright licence is obtained from RICS (see www.ricsbooks.com), which can also supply all other necessary documents. (For more details, see Appendix E.)

1.8 Negligence

If the court is presented with an allegation of professional negligence against a surveyor, it will most likely consider any relevant PNs in deciding whether the surveyor acted with reasonable competence. Failure to comply with the relevant PN may result in an adverse finding against the surveyor.

A surveyor conforming to the requirements of this PN should be better able to demonstrate competence in response to an allegation of negligence.

2 Requirements and scope of the RICS HomeBuyer Service

2.1 UK countries

This PN is written to reflect the property law in Scotland. A separate version applies, and is available, for England, Wales, Northern Ireland, the Channel Islands and the Isle of Man.

2.2 Application

This PN:

(a) describes and defines the service, in particular specifying those elements which are mandatory; and
(b) applies without exception where any surveyor enters into a contract with a client to provide the service.

It is mandatory to use the specified format, without variation. No departure from the specified mandatory elements of the service is permitted.

Guidance on the practical application of the PN is given in section 4, Compiling the report – commentary and guidance.

2.3 Type of property

The service applies to houses, bungalows and flats that are conventional in type and construction and are apparently in reasonable condition. This would generally include property conversions and properties that:

• are of Victorian to present-day construction;
• have load bearing structures or simple frames;
• use conventional building materials and construction methods; and
• have service systems commonly used in domestic residential properties.

A surveyor may have particular technical skills and experience of unusual or specialist construction types and thus may be satisfied that he or she
can offer the service on an extended range of properties. Examples typically include:

- properties built using less common structures and materials (e.g. 1920s timber-framed, mock Tudor houses and thatched roofed properties);
- prefabricated, concreted and steel-framed properties built after the Second World War; and
- properties using new and developing technologies or materials.

However, even where the surveyor has specialist knowledge and expertise, the inspection and report must conform to the DHS. Any additional activities (for example, tests or calculations) must be capable of inclusion under additional advice, as defined in subsection 2.5, and agreed in writing with the client.

### 2.4 Focus and limitations of the service

The service is specifically designed for lay clients who are seeking a professional opinion at an economic price.

The focus of the service is on assessing the general condition of the main elements of a property, and identifying and evaluating the particular features that affect its present value and may affect its future resale.

The inspection is not exhaustive, and no tests are undertaken. There is, therefore, a risk that certain defects may not be found that would have been uncovered if testing and/or a more substantial inspection had been undertaken. This is a risk that the client must accept. However, where there is ‘a trail of suspicion’ the surveyor ‘must take reasonable steps to follow the trail’. These ‘reasonable steps’ may include recommending further investigation. (See also subsection 2.7.)

The DHS does not preclude the surveyor giving of such advice. Section 4, Compiling the report – commentary and guidance, specifies the way in which this should be handled in the HBR.

The service does not include an asbestos inspection that may fall within the Control of Asbestos Regulations 2006 (SI 2006/2737). However, asbestos containing materials, if suspected, should be reported and cross-referenced to section J Risks.

For personal safety reasons and informing clients, members should read the Asbestos and its implications for members and their clients (RICS guidance note, 2009). Whilst this is not an asbestos survey, members should be aware of the common asbestos containing materials used and where they are frequently found in residential buildings.

### 2.5 Additional advice

The surveyor may include additional advice to the service (as allowed in the DHS and agreed in writing with the client) only:

(a) where a client requires some additional advice to the standard service; and

(b) where it is possible for this additional advice to be reported upon within the HBR without materially altering the nature of the service. It must be reported for the relevant element, and condition ratings must be applied.

Such additional advice is likely to be investigations addressing particular concerns of the client. If brief, these may be included in the text of the report. In any case, they are to be identified clearly and specifically as the additional advice requested by the client.

Examples of additional advice include:

- inspection of parts or areas not normally examined;
- general comment on plans for limited extensions to the property;
- more extensive inspection of a flat’s shared areas or services; and
- more detailed information than normal on amenities or environmental matters.

Where significant repairs are required, the client may request a ‘when repaired’ valuation as a ‘special assumption’ separate to the opinion of value in section K. This can also be undertaken as additional advice but is reported in overall opinion field of section C.

### 2.6 Extra services

Extra services, concerning the provision of information or advice which is outside the concept of the HBS, must not be provided as part of the service.

**Note:** RICS is looking at developing a range of specialist reports focused on individual issues that may be offered by surveyors as an extra service.
2.7 Further investigations

Recommendations and caveats for further investigations, such as the testing of services or structural movement, should be included in HBR only when the surveyor feels unable to reach necessary conclusions with reasonable confidence. The element under consideration should, in such instances, be given a condition rating 3 (see also subsections 2.4 and 4.5).

In such cases it may be appropriate either to:

(a) defer providing the valuation until the result of such further investigations are available; or
(b) provide the valuation on a ‘special assumption’ dependent on the outcome of specified further recommended investigation. (As defined in the glossary of the Red Book, a special assumption is:

‘an assumption that either:
• requires the valuation to be based on facts that differ materially from those existing at the date of valuation; or
• is one that a prospective purchaser (excluding a purchaser with a special interest) could not reasonably be expected to make at the date of valuation, having regard to prevailing market conditions’.)

3 The contract

3.1 Before making a legal contract

There is a general expectation that before a surveyor can accept a commission and give a legal commitment to provide the service for a particular property, the prospective client is first provided, as early as possible, with the following (see Introduction or subsection 1.1 for full term names):

• DHS;
• STE, which sits within the DHS (with particular attention being drawn to clause 6 on liability); and
• where applicable, a list of any particular types of dwelling (e.g. properties beyond a certain age or size) for which the surveyor is not prepared to accept instructions to provide the service.

The DHS and STE form part of the contract between the surveyor and the client.

3.2 The contract letter

The surveyor must produce a written statement to the client (the ‘contract letter’) specifying all the necessary facts and other required conditions which are not specified in the STE. These facts and conditions are:

(a) the name and address of the client, and the address of the property to be inspected;
(b) the agreed price/asking price (if any) for the property;
(c) the purpose of the valuation and the legal interest being valued;
(d) a statement confirming what will be the date of the valuation (day/month/year) and the full title of the current edition of the Red Book that will apply;
(e) any limits or exclusions of liability to others than the identified;
(f) the proposed charge for the service, plus any exceptional charges to be incurred, together with the terms of payment;
(g) a statement explaining that:
(i) these charges will need to be revised if it is found, on arrival at the property, that it differs substantially from the description previously given to the surveyor; or
(ii) it is outside the surveyor’s experience;
(h) disclosure of any material involvement or conflicting interest, or a statement that none exists; and
(i) an agreement that the nature and source of any third party information that the client has requested is to be relied upon in the report.

The surveyor is reminded that the ‘mandatory’ requirements of terms of engagement relating to valuations covered by the current edition of the Red Book apply to this service, and all details must be agreed with the client prior to the release of the report.

3.3 Attachments to the contract letter

If the surveyor has not already provided the client with the items listed in subsection 3.1 (i.e. the DHS, STE and, if applicable, a list of unsuitable properties), these are to be included with the contract letter.

The other necessary attachment to the contract letter is a form of the client’s instructions to proceed, which is prepared by the surveyor. This
standard form may be either a statement on a separate sheet, or an appendix to the letter.

It acknowledges receipt of the surveyor’s contract letter and attachments, and that the contents are understood and accepted. It also specifically instructs the surveyor to proceed with the HBS and, where required, to proceed with any additions to the service and/or any specified extra service which the client requires.

### 3.4 Client’s further requirements

If the client wants any additional advice which can reasonably be investigated and reported on within the limits of the service, and/or any extra service that is outside the terms of the service, then the surveyor must decide how to treat these appropriately and must specify the arrangement in the contract letter.

Any agreed additional advice (see subsection 2.5) may – at the discretion of the surveyor and depending upon its content and length – be either incorporated with, or attached to, the main report.

For any extra service (see subsection 2.6), however, it is essential that the surveyor establishes a new and separate contract outside the HBS.

### 4 Compiling the report – commentary and guidance

#### 4.1 General

All information and comments in the report should be kept short and to the point. This will result in the whole report being concise in fact as well as in theory. It will also avoid confusing the client with distractions, such as irrelevant and unhelpful details and surveyor jargon, which can be incomprehensible and off-putting to laypersons.

The following subsections are intended to provide guidance to compiling the report. All sample paragraphs given here are offered only as examples of appropriate style. They are neither comprehensive nor intended to be copied verbatim.

#### 4.2 Condition ratings and rules governing them

All reports will include condition ratings on elements within section E Outside the property; section F Inside the property; section G Services; and section H Grounds (including shared areas for flats). These are identified by the inclusion of a condition rating box. The rules governing condition ratings are strict and must be followed in order to achieve a degree of consistency in their application.

Condition ratings must be based on the factual evidence seen or deduced. Where such evidence cannot readily be identified or is inconclusive, the surveyor must use his or her professional judgment in arriving at the appropriate condition rating.

The condition ratings are:

#### 3 Defects that are serious and/or need to be repaired, replaced or investigated urgently.

This rating must be used where the defect is of a serious nature, where immediate repairs are required or where the surveyor feels unable to reach the necessary conclusion with reasonable confidence. For more guidance regarding further investigations, see subsections 2.7 and 4.5. The test of a ‘serious defect’ is where the surveyor considers that:

- the defect compromises the structural integrity of the property; and/or
- the defect impairs the intended function of the building element.

The test for ‘urgent’ is:

- a defect which, if not repaired/remedied immediately, will cause structural failure or serious defects in other building elements; and/or
- a defect which presents a safety threat.

#### 2 Defects that need repairing or replacing but are not considered to be either serious or urgent. The property must be maintained in the normal way.

This rating must be used where repairs are required, but the defect is not considered to be serious or urgent.

Questions that will help determine whether to apply this condition rating to the defective element are as follows:

- Is it a ‘serious defect’ which compromises the structural integrity of the property?
- Is it ‘urgent’ where the repair cannot be
deferred until the next anticipated period of regular maintenance without allowing the defect to develop into a structural failure, or lead to a ‘serious’ defect in another element of the building?

If the answer to both is no, then this rating applies.

No repair is currently needed. The property must be maintained in the normal way.

This rating must be used when there are no indications of present or suspected defects that require the undertaking of a specific repair. Normal maintenance must not be treated as a repair for the purpose of the HBR. Questions that will help determine whether to apply this condition rating to the element are as follows:

• Is there a repair or a replacement required for the element?
• Is the work required more than normal maintenance?

If the answer to both is no, then this rating applies.

Not inspected

This rating must be used when it is not possible to inspect any parts of the dwelling usually covered. If the surveyor is concerned about these parts, advice must be given about any further investigations that are needed.

Subsections 2.7 and 4.5 provide guidance regarding the recommending of further investigations.

Examples of serious and/or urgent defects may include:

• all those ‘essential repairs’ that are normally covered in a mortgage valuation report (e.g. structural, problems of rising/penetrating damp, dry rot);
• any other repairs necessary to restore the normal functioning of an element of the property (e.g. blocked drains);
• urgent and/or significant defects concerning the site (e.g. repair of defective retaining wall).

A present or suspected defect that requires further investigation must be reported with a condition rating 3. In such cases, enough evidence to justify suspicion must be present and explained in the report. Giving careful and consistent condition ratings will enable clients to judge the importance (seriousness or urgency) of defects.

The surveyor should apply personal knowledge of building construction and pathology to the inspection and analysis required to decide condition ratings and explain their justification. To arrive at a condition rating, the surveyor should:

• refer to condition only and not to purely cosmetic issues that have no effect on longevity or performance;
• consider any detrimental effect on other building elements;
• reflect performance;
• compare ‘like with like’ (e.g. not the life expectancy of a flat, felted roof with a pitched, tiled one);
• assume that regular ‘normal maintenance’ – work of a recurring nature required for certain building elements in order to preserve their integrity and functionality – will be undertaken in the future;
• be consistent;
• follow generally accepted building practice;
• be reasonable (perfection is not the norm);
• disregard differences in product quality, unless performance and life expectancy are seriously impaired;
• disregard individual taste or fashion; and/or
• take safety aspects into account.

Because all buildings are complex structures comprising many different interacting elements, defects in one element will usually have an impact on others. It is therefore not enough to analyse defective building elements in isolation; the surveyor should also consider the consequences that may have followed from an obvious defect.

Very few older buildings remain as they were originally constructed. The surveyor should be vigilant over any works or alterations that may now have been undertaken which may impact the performance and function of the original parts of the structure and other components. The surveyor should also fully consider any impact those works or alterations will have on condition and future building performance.

The performance of each building element will vary, and perfection should not be expected, nor should
the element be measured against such standard. The surveyor should consider only whether a building element performs the function that is intended, while also being aware that in some cases the function may be redundant.

4.3 Applying the condition ratings
The overriding principle is that only one condition rating is allocated to each element described in sections E, F, G and H and carried forward to the front of the report in the summary of the condition ratings boxes in section C.

The surveyor should use the following methodology to establish the condition rating for each element.

4.3.1 Step one: identifying the elements and sub-elements
The surveyor inspects the property, identifies all the elements and sub-elements, and makes notes on the condition in the site notes. Where an element consists of one or more different and distinct 'parts', it should be divided into appropriate 'sub-elements'. For example, a typical semi-detached, interwar dwelling may have the following:

- three roofs – the main hipped and pitched roof, a front bay roof and a rear ‘back addition’ roof;
- two chimneys – the larger chimney at the ridge serving the main rooms and a single chimney from the kitchen area;
- two external walls – cavity walls to the main house and solid walls to the back addition; and
- two types of windows – the original single-glazed casement windows to the rear and PVC double-glazed replacements to the front and side.

All of these parts could be considered as sub-elements. To make sure the report does not become complex, this subdivision should be strictly limited to generic parts only. For example, the cavity wall should not be further subdivided into the front, rear and side wall, or the main roof split into front, rear and hip slopes.

4.3.2 Step two: condition rating the elements and sub-elements
After sufficient reflection, the surveyor should apply a condition rating to all the elements and sub-elements in accordance with the methodology in described in subsection 4.2.

4.3.3 Step three: establishing the element rating
The condition rating to be shown in the elemental condition rating box for each element must be the worst one identified by this process. The following examples illustrate this procedure.

- Where the element has only a single part, then that will be the condition rating for the element, which must be included in the elemental condition rating box.
- Where there are some parts or sub-elements, the worst condition rating must be the one that is shown.
- Where some of the sub-elements are in the same condition and the latter is the worst condition rating of all the sub-elements, then that condition rating must be shown in the elemental condition rating box.

The condition rating shown in the elemental condition rating box will be the one that goes into the condition rating table in section C.

4.4 Report writing
The elemental text box must be used to provide the necessary evidence that supports the surveyor’s professional judgment of the condition rating reported, as well as the condition ratings of individual sub-elements. The following procedure should be observed.

- The worst rated sub-element should be described first, and the best last.
- Where several sub-elements have the same worst rating, the surveyor must choose the one that presents the greatest problem to the property owner and report this before the other sub-elements with the same rating. (For example, where the main hipped roof, bay roof and rear single-storey extension are all given a condition rating 2, the surveyor may choose to include the main roof in the summary because it is higher and larger, and may be more expensive to repair.)
- To simplify the report, elements that have the same rating could be reported together, especially if they have all been given a condition rating 1.
The surveyor should not report on the cost of any work to correct defects or how repairs should be carried out, as this exceeds the scope and purpose of the report.

Consideration of ordinary future maintenance is outside the scope of the report. Nevertheless, the surveyor should comment when the design or materials used in the construction of a building element result in the latter needing to be maintained more frequently or at a higher cost than normally expected, or if access is unusually complex.

Software producers are likely to market a variety of report writing packages that will generate most of the report using standard phrases. However, the surveyor will always be able to produce the reports using his or her own text and phrases without the use of specialist software.

When writing the report, the surveyor should follow this format.

• The first sentence or paragraph describes the construction and location of the element/sub-element.
• The next sentence explains the type of problem (if any), including:
  – the actual part that has something wrong with it (e.g. the slates, the flat roof covering, the brickwork);
  – what is wrong with it (e.g. broken, leaking, missing, rotten);
  – the extent of the problem (e.g. badly cracked, largely missing, completely rotten);
  and
  – the possible effect of the problem.
• The next section adds more information about what needs to be done by when and by whom. This is partly described in the standard paragraphs from the condition rating categories, but more detail can be provided here.
• A final sentence may be added that outlines the implications of the problem if it is not addressed. A concise explanation can be helpful where inaction could be serious.

There is no prescription for the length of the HBR, but each element or sub-element should have around four or five sentences written about it. The surveyor should use non-technical terms throughout, although the inclusion of some defined technical words can occasionally help towards clarification. In this case, surveyors should provide the laypersons’ explanation first, followed by the technical term. Figure 1 provides some general advice, along with some sample paragraphs, for completing the report regarding each sub-element.

Where structural movement, dampness or timber defects are found, these should be reported in the elemental text box for the affected element(s) and cross referenced to section J, where these risks must be reported.

Note the client is given the following advice in the ‘What to do now’ section of the report: ‘Before you make a legal commitment to buy the property, you should get reports and quotations for all the repairs and further investigations the surveyor may have identified’. As this is stated in this section of the form, there is no need to include this in the box.

Table 1 (on page 12) provides useful guidance as to where issues can be reported in the HBR. This is not exhaustive and does not cover every eventuality. The surveyor must use personal judgment regarding where to report issues.

4.5 Further investigations

The surveyor’s knowledge of building construction and pathology will, at times, lead to a suspicion that a visible defect may affect other concealed building elements. Other times, the extent of a visible defect is not possible to ascertain within the confines of an HBS inspection. In either case, the surveyor must recommend that a further investigation is undertaken and a condition rating 3 is applied.

However, the surveyor should not recommend a further investigation just because a given building element is inaccessible within the confines of a normal inspection, e.g. the covering of one roof slope cannot be seen from any reasonable vantage points, but there is no evidence of defect in the roof void. In such cases, surveyors should note the restriction for the building element and apply an NI condition rating.

The surveyor should exercise professional judgment and must not call for further investigations only to cover him or herself against future liabilities.
Figure 1: Example of reporting using sub-elements

| E2 | Roof coverings |

The surveyor identifies the sub-element(s), e.g. a house may have a sloping roof to the main part and a flat roof to an extension. Say the sloping roof is considered by the surveyor as a condition rating 2 – the worst rating between the two sub-elements. This, therefore, is reported first and the rating inputted in the element condition rating box (above right). The surveyor inputs text in the box in line with guidance.

**Sloping roof**
The sloping roofs to the main house and rear addition are covered with slates fixed over timber boarding (sometimes called ‘sarking boarding’). Several slates are cracked and poorly secured (condition rating 2). You may find it economic to replace the whole roof covering rather than continuing to repair.

You should check with your legal advisers before you do any work because the property is in a conservation area (see section I).

[Say the next sub-element, the flat roof, is considered by the surveyor as a condition rating 1, i.e. better than the sloping roof with a condition rating 2. This is reported after the sloping roof, and the rating itself is not inputted in the element condition rating box; instead it is just reported in the text. The surveyor inputs text in the box in line with guidance.]

**Flat roof**
The flat roof over the rear lounge extension is covered with roofing felt (condition rating 1). Flat roof coverings do not last as long as those on sloping roofs and they can quickly get worse.

---

### 4.6 Condition ratings and Market Value

The surveyor must assess the current Market Value after applying the condition ratings. The following methodology must then be used to assess the impact of the condition ratings applied when forming an opinion of the Market Value of the property.

- Elements with a condition rating 1 will normally not have an impact on the Market Value of the property.
- Elements with a condition rating 2 will generally not have an impact on the Market Value, unless there is an accumulation of items with this rating that would increase costs to a point where the surveyor judges that there would be an impact on Market Value.
- Elements with a condition rating 3 will generally have an impact on Market Value.

---

### 4.7 Overall opinion

The surveyor’s overall opinion of the property is given in overall opinion box in section C. Although it is placed before the element boxes for the convenience of the client, it should be the last paragraph the surveyor writes and should only be provided after fully reflecting on the whole report.

The surveyor must form an independent judgment of the value and marketability of the property and, of course, express these opinions carefully. An opinion should be given on the price and the resale prospects, with appropriate brief reference to the presence (or absence) of key features and the condition of the property. The surveyor should also give an opinion as to whether it is reasonable to proceed with the purchase.

The overall opinion is an important element of the service for the following reasons.

</table>
Note: See the checklists in Part C for further guidance.

- It sets the client off on the right road in the front of the report by providing a brief, simple and clear signpost that will help orientate the client before the latter embarks on the body of the report.
- It focuses on helping the client to make the most important decision of all: whether or not to proceed.
- It is the only place in the report for key observations, including a colour coded summary of the condition ratings of elements of the property.
- It provides the client with a summary of the information needed in order to take the next crucial steps.
- It enables the surveyor to put the summary of the condition ratings in the context of the overall condition of the property. This will be important, for example, if there is an abundance of condition rating 2s or 3s relating to sub-elements shown in the summary table, when most of the other elements are condition rating 1s. Without context, the ratings list may give the client an unbalanced view about the property.

The overall opinion on whether or not it would be reasonable to proceed with the purchase is likely to fall within one of four groups: unqualified ‘yes’, qualified ‘yes’, ‘no’ and ‘cannot say until [...]’.

Sample paragraphs for these groups can be found in *RICS Survey Writer: sample phrases for the RICS HomeBuyer*, 2nd edition, due to be published in 2011. An excerpt from this publication is given on the following page.

It is recommended to keep the overall opinion as concise as possible, excluding all detail. The space provided on the pre-printed form is ample for all but the most exceptional circumstances.

The overall opinion therefore:
- is not a description of the property; and
- is not a list of condition ratings (these are all dealt with in the summary boxes directly below it).
Sample paragraphs for overall opinion section

**Price OK but common defects**
This property is considered to be a reasonable proposition for purchase at a price of £[amount], provided that you are prepared to accept the cost and inconvenience of dealing with the various repair/improvement works reported. These deficiencies are common in properties of this age and type. Provided that the necessary works are carried out to a satisfactory standard, I see no reason why there should be any special difficulty on resale in normal market conditions.

**Unwise to proceed at any price**
In my opinion the property is not a reasonable purchase at any price. This is because [state specific condition rating 3 or risks concisely]. I very much regret, therefore, that I must advise you that it would be most unwise to proceed.

**Opinion not possible**
This property is in need of extensive remedial and modernisation works. I recommend that, if you wish to proceed, you should obtain further advice and quotations, as discussed in the report. Although my overall opinion on the Market Value of the property would normally be given here, it is not possible to do so in this particular case because of the very substantial nature and extent of the necessary work. I will, however, be pleased to give my opinion as soon as this additional information becomes available.

Part B: The documentation

This part reproduces the documents that the client will receive. These are:

- DHS;
- STE that sits within the DHS; and
- Maintenance tips.

Sets of the official documents are available from RICS. See Appendix E for contact details, as well as for information and documentation on the copyright licence.

Commentary on particular elements of the DHS is also included to clarify the scope of the inspection (see page 16).
Commentary on particular elements of the Description of the RICS HomeBuyer Service (Scotland)

1 Scope of the inspection

This commentary aims to clarify aspects of the inspection by the surveyor that need to be noted.

If the inspection reveals a cause for concern, no wording in the DHS prevents the surveyor from examining or commenting on any matter that needs to be pursued, as judged by the surveyor. Such matters may include:

- important considerations other than the repair or replacement of defective elements and their future maintenance (e.g. insurance);
- any inherent problem concerning the site, location or environment about which the property owner can do nothing (e.g. dangerous access, pollution); and
- forewarning of any potentially significant problem (e.g. flooding).

The inspection includes examination from staircases and within accessible roof spaces. Individual timbers are not examined.

The surveyor inspects the roof structure from inside the roof space. The surveyor also visually inspects the roof space where there is safe and reasonable access, normally defined as being from a 3 metre ladder within the property or common areas. If this is not possible, the surveyor will use other means to access the roof space if he or she deems it safe and reasonable to do so. The surveyor does not open fixed hatches, or move or lift insulation material, stored goods or other contents.

The surveyor inspects floor surfaces and, where possible, subfloor areas. These are inspected only to the extent visible from a readily accessible and unfixed hatch by way of an inverted ‘head and shoulders’ inspection at the access point. Physical access to the subfloor area may be taken, if the surveyor deems it safe and reasonable to do so, and may be subject to a minimum clearance of 1 metre between the underside of floor joists and the solum as determined from the access hatch. The surveyor does not open fixed hatches.

If it was not possible to inspect any parts of the property where condition ratings are to be applied, a ‘not inspected’ (NI) rating must be given.

2 Services to the property

Despite the valuation assumption that mains services (including the heating) are connected, this is to be confirmed where possible. Services are not to be turned on or off, as this would be considered a test.

3 Equipment

The list of equipment is not intended to be comprehensive. At the surveyor’s discretion, he or she may – but are not obliged to – use other equipment (e.g. compass, tape, meter box key, spirit level). The use of cameras, while encouraged, is also discretionary. There is no objection to the use of machines for recording site notes, provided that a permanent record of those notes is kept.

4 Flats

The inspection of any roof space, communal or otherwise, will be undertaken where there is safe and reasonable access, normally defined as being from a 3 metre ladder within the property or common areas. If this is not possible, the surveyor will use other means to access the roof space if he or she deems it safe and reasonable to do so. The surveyor does not open fixed hatches, or move or lift insulation material, stored goods or other contents.
Description of the RICS HomeBuyer Service (Scotland)

The service

The RICS HomeBuyer Service includes:

- an inspection of the property (see 'The inspection');
- a report based on the inspection (see 'The report'); and
- a valuation, which is part of the report (see 'The valuation').

The surveyor who provides the RICS HomeBuyer Service aims to give you professional advice to help you to:

- make an informed decision on whether to go ahead with buying the property;
- make an informed decision on what is a reasonable price to pay for the property;
- take account of any repairs or replacements the property needs; and
- consider what further advice you should take before committing to purchase the property.

The inspection

The surveyor carries out a non-disruptive visual inspection externally from ground level and internally from floor level. The surveyor inspects roofs, chimneyheads and other surfaces on the outside of the building where they are readily visible from ground level and, if necessary, from neighbouring public property where accessible. Internally this means that the surveyor does not lift carpets or floor coverings of floorboards, or move heavy furniture, stored items and insulation. The surveyor does not remove fixed covers or hatches.

The surveyor inspects the roof structure from inside the roof space. The surveyor also visually inspects the roof space where there is safe and reasonable access, normally defined as being from a 3 metre ladder within the property. If this is not possible, the surveyor will use other means to access the roof space if he or she deems it safe and reasonable to do so. The surveyor does not open fixed hatches, or move or lift insulation material, stored goods or other contents.

The surveyor inspects floor surfaces and, where possible, sub-floor areas. These are inspected only to the extent visible from a readily accessible and unfixed hatch by way of an inverted ‘head and shoulders’ inspection at the access point. Physical access to the sub-floor area may be taken, if the surveyor deems it safe and reasonable to do so, and may be subject to a minimum clearance of 1 metre between the underside of floor joists and the soffit as determined from the access hatch. The surveyor does not open fixed hatches.

The surveyor cannot inspect the condition of the inside of any chimneys, boiler or other flues, nor can the surveyor comment on areas that are inaccessible or concealed. If areas are not visible that would normally be inspected, these are identified and further investigation may be needed by a specialist contractor.
Description of the RICS HomeBuyer Service (Scotland)

The surveyor does not report on the cost of any work to put right defects or make recommendations on how these repairs should be carried out. Some maintenance and repairs the surveyor suggests may be expensive. Other matters may be reported where the surveyor judges this to be helpful and constructive.

Services to the property
Services are generally hidden within the construction of the property. This means that only the visible parts of the available services can be inspected, and the surveyor does not carry out specialist tests. The visual inspection cannot assess the efficiency or safety of electrical, gas or other energy sources; plumbing, heating or drainage installations (or whether they meet current regulations); or the inside condition of any chimney, boiler or other flue.

Outside the property
The surveyor inspects the condition of boundary walls, fences, permanent outbuildings and areas in common (shared) use. To inspect these areas, the surveyor walks around the grounds and any neighbouring public property where access can be obtained.

Buildings with swimming pools and sports facilities are also treated as permanent outbuildings, but the surveyor does not report on the leisure facilities, such as the pool itself and its equipment, landscaping and other facilities (for example, tennis courts and temporary outbuildings).

Flats
When inspecting flats, the surveyor assesses the general condition of outside surfaces of the building, as well as its access areas (for example, shared hallways and staircases). The surveyor inspects roof spaces, or the communal roof space for flats, using a 3 metre ladder, only if there is safe and reasonable access after considering health and safety guidance. The surveyor does not inspect drains, lifts, fire alarms and security systems.

Dangerous materials, contamination and environmental issues
The surveyor does not make any enquiries about contamination or other environmental dangers. However, if the surveyor suspects a problem, he or she should recommend a further investigation.

The surveyor may assume that no harmful or dangerous materials have been used in the construction and does not have a duty to justify making this assumption. However, if the inspection shows that these materials have been used, the surveyor must report this and ask for further instructions.

The surveyor does not carry out an asbestos inspection and does not act as an asbestos inspector when inspecting properties that may fall within the Control of Asbestos Regulations 2006. With flats, the surveyor assumes that there is a ‘dutyholder’ (as defined in the regulations), and that in place are an asbestos register and an effective management plan which does not present a significant risk to health or need any immediate payment. The surveyor does not consult the dutyholder.
Description of the RICS HomeBuyer Service (Scotland)

The report

The surveyor produces a report of the inspection for you to use, but cannot accept any liability if it is used by anyone else. If you decide not to act on the advice in the report, you do this at your own risk. The report focuses on matters that, in the surveyor’s opinion, may affect the value of the property if they are not addressed.

The report is in a standard format and includes the following sections.

A  Introduction to the report
B  About the inspection
C  Overall opinion and summary of the condition ratings
D  About the property
E  Outside the property
F  Inside the property
G  Services
H  Grounds (including shared areas for flats)
I  Issues for your legal advisers
J  Risks
K  Valuation
L  Surveyor’s declaration
   What to do now
   Description of the RICS HomeBuyer Service
   Typical house diagram

Condition ratings

The surveyor gives condition ratings to the main parts (the ‘elements’) of the main building, garage and some outside elements. The condition ratings are described as follows.

Condition rating 3 – defects that are serious and/or need to be repaired, replaced or investigated urgently.

Condition rating 2 – defects that need repairing or replacing but are not considered to be either serious or urgent. The property must be maintained in the normal way.

Condition rating 1 – no repair is currently needed. The property must be maintained in the normal way.

NI – not inspected.

The surveyor notes in the report if it was not possible to check any parts of the property that the inspection would normally cover. If the surveyor is concerned about these parts, the report tells you about any further investigations that are needed.
Description of the RICS HomeBuyer Service (Scotland)

Issues for legal advisors

The surveyor does not report on the cost of any work to put right defects or make recommendations on how these repairs should be carried out. However, there is general advice in the ‘What to do now’ section at the end of the report.

The surveyor does not act as ‘the legal adviser’ and does not comment on any legal documents. If, during the inspection, the surveyor identifies issues that your legal advisers may need to investigate further, the surveyor may refer to these in the report (for example, check whether there is a warranty covering replacement windows).

This report has been prepared by a surveyor (the Employee) on behalf of a firm or company of surveyors (the Employer). The statements and opinions expressed in this report are expressed on behalf of the Employer, who accepts full responsibility for these.

Without prejudice and separately to the above, the Employee will have no personal liability in respect of any statements and opinions contained in this report, which shall at all times remain the sole responsibility of the Employer to the exclusion of the Employee.

In the case of sole practitioners, the surveyor may sign the report in his or her own name unless the surveyor operates as a sole trader limited liability company.

To the extent that any part of this notification is a restriction of liability within the meaning of the Unfair Contract Terms Act 1977 it does not apply to death or personal injury resulting from negligence.

Energy

The surveyor transcribes the energy-efficiency and environmental impact ratings as stated on the Energy Performance Certificate (EPC) on the home, if available. The EPC may not have been prepared by the surveyor who has prepared this report. If that is the case, then the figures stated have simply been lifted from the certificate that was exhibited to the surveyor and does not in any form confirm that they are correct, nor does it attach any liability to the surveyor who has prepared this report.

Risks

The surveyor reports on property-related risks that include defects that need repairing or replacing, as well as defects that have existed for a long time and cannot reasonably be changed, but may present a risk. The surveyor reports on property-related risks or hazards that are identifiable and within the scope of the inspection.

The valuation

The surveyor gives an opinion on both the Market Value of the property and the reinstatement cost at the time of the inspection (see the ‘Reinstatement cost’ section).

Market Value

‘Market Value’ is the estimated amount for which a property should exchange on the date of the valuation between a willing buyer and a willing seller, in an arm’s length transaction after the property was properly marketed wherein the parties had each acted knowledgeably, prudently and without compulsion.
Description of the RICS HomeBuyer Service (Scotland)

When deciding on the Market Value, the surveyor also makes the following assumptions.

The materials, construction, services, fixtures and fittings, and so on
The surveyor assumes that:

- an inspection of those parts that have not yet been inspected would not identify significant defects or cause the surveyor to alter the valuation;
- no dangerous or damaging materials or building techniques have been used in the property;
- there is no contamination in or from the ground, and the ground has not been used as landfill;
- the property is connected to, and has the right to use, the mains services mentioned in the report; and
- the valuation does not take account of any furnishings, removable fittings and sales incentives of any description.

Legal matters
The surveyor assumes that:

- the property is sold with ‘vacant possession’ (your legal advisers can give you more information on this term);
- the condition of the property, or the purpose that the property is or will be used for, does not break any laws;
- no particularly troublesome or unusual restrictions apply to the property, that the property is not affected by problems which would be revealed by the usual legal enquiries and that all necessary planning and Building Regulations permissions (including permission to make alterations) have been obtained and any works undertaken comply with such permissions; and
- the property has the right to use the mains services on normal terms, and that the sewers, mains services and roads giving access to the property have been ‘adopted’ (that is, they are under local authority, not private, control).

The surveyor reports any more assumptions that have been made or found not to apply.

Reinstatement cost
Reinstatement cost is the cost of rebuilding an average home of the type and style inspected to its existing standard using modern materials and techniques and in line with current Building Regulations and other legal requirements.

This includes the cost of rebuilding any garage, boundary or retaining walls and permanent outbuildings, and clearing the site. It also includes professional fees, but does not include VAT (except on fees).

The reinstatement cost helps you decide on the amount of buildings insurance cover you will need for the property.
Description of the RICS HomeBuyer Service (Scotland)

Standard terms of engagement

1 The service – the surveyor provides the standard RICS HomeBuyer Service ("the service") described in the 'Description of the RICS HomeBuyer Service', unless you and the surveyor agree in writing before the inspection that the surveyor will give you additional advice.

2 The surveyor – the service is to be provided by an AssocRICS, MRICS or FRICS member of the Royal Institution of Chartered Surveyors, who has the skills, knowledge and experience to survey, value and report on the property.

3 Before the inspection – You inform the surveyor what the asking price of the property is or any agreed price that has been reached. You will also agree to advise the surveyor if you have any particular concerns or proposals for the property (such as plans for extension etc.).

4 Terms of payment – you agree to pay the surveyor’s fee and any other charges agreed in writing.

5 Cancelling this contract – you are entitled to cancel this contract by giving notice to the surveyor's office at any time before the day of the inspection. The surveyor does not provide the service (and reports this to you as soon as possible) if, after arriving at the property, the surveyor decides that he or she lacks enough specialist knowledge of the method of construction used to build the property.

   If you cancel this contract, the surveyor will refund any money you have paid for the service, except for any reasonable expenses. If the surveyor cancels this contract, he or she will explain the reason to you.

6 Liability – the report is provided for your use. It is confidential to you and your professional advisors. The surveyor cannot accept responsibility if it is used by anyone else. Any such party relies on the report at its own risk.

Complaints handling procedure

The surveyor will have a complaints handling procedure and will give you a copy if you ask.

Note: These terms form part of the contract between you and the surveyor.

This report is for use in Scotland.
Maintenance tips

Your home needs maintaining in the normal way, and this general advice may be useful when read together with your report. It is not specific to this property and does not include comprehensive details. Problems in construction may develop slowly over time. If you are concerned contact an RICS qualified surveyor for further advice.

Outside the property

You should check the condition of your property at least once a year and after unusual storms. Your routine redecoration of the outside of the property will also give you an opportunity to closely examine the building.

- Chimney stacks: Check these occasionally for signs of cracked cement, split or broken pots, or loose and gaping joints in the brickwork or render. Storms may loosen aerials or other fixings, including the materials used to form the joints with the roof coverings.

- Roof coverings: Check these occasionally for slipped, broken and missing tiles or slates, particularly after storms.

Flat roofing has a limited life, and is at risk of cracking and blistering. You should not walk on a flat roof. Where possible keep it free from debris. If it is covered with spar chippings, make sure the coverage is even, and replace chippings where necessary.

- Rainwater pipes and gutters: Clear any debris at least once a year, and check for leaks when it is raining. You should also check for any loose downpipe connectors and broken fixings.

- Main walls: Check main walls for cracks and any uneven bulging. Maintain the joints in brickwork and repair loose or broken rendering. Re-paint decorated walls regularly. Cut back or remove any plants that are harmful to mortar and render. Keep the soil level well below the level of any damp proof course (150mm minimum recommended) and make sure any ventilation bricks are kept clear. Check over cladding for broken, rotted or damaged areas that need repairing.

- Windows and doors: Once a year check all frames for signs of rot in wood frames, for any splits in plastic or metal frames and for rusting to latches and hinges in metal frames. Maintain all decorated frames by repairing or redecorating at the first sign of any deterioration. In autumn check double glazing for condensation between the glazing, as this is a sign of a faulty unit. Have broken or cracked glass replaced by a qualified specialist. Check for broken sash cords on sliding sash windows, and sills and window boards for any damage.

- Conservatories and porches: Keep all glass surfaces clean, and clear all rainwater gutters and down pipes. Look for broken glazing and for any leaks when it's raining. Arrange for repairs by a qualified specialist.

- Other joinery and finishes: Regularly redecorate all joinery, and check for rot and decay which you should repair at the same time.
Maintenance tips

Inside the property
You can check the inside of your property regularly when cleaning, decorating and replacing carpets or floor coverings. You should also check the roof area occasionally.

• Roof structure: When you access the roof area, check for signs of any leaks and the presence of vermin, rot or decay to timbers. Also look for tears to the under-felting of the roof, and check pipes, lagging and insulated areas.

• Ceilings: If you have a leak in the roof the first sign is often damp on the ceiling beneath the roof. Be aware if your ceiling begins to look uneven as this may indicate a serious problem, particularly for older ceilings.

• Walls and partitions: Check these when you are cleaning or redecorating. Look for cracking and impact damage, or damp areas which may be caused by plumbing faults or defects on the outside of the property.

• Floors: Be alert for signs of unevenness when you are cleaning or moving furniture, particularly with timber floors.

• Fireplaces, chimney breasts and flues: You should arrange for a qualified specialist to regularly sweep all used open chimneys. Also, make sure that brick-ed flues are ventilated. Flues to gas appliances should be checked annually by a qualified gas technician.

• Built-in fittings, woodwork and joinery: Check for broken fittings.

Services

• Ensure all meters and control valves are easy to access and not hidden or covered over.

• Arrange for an appropriately qualified technician to check and test all gas and oil services, boilers, heating systems and connected devices once a year.

• Electrical installations should only be replaced or modified by a suitably qualified electrician and tested as specified by the Electrical Safety Council (recommended minimum of a ten year period if no alterations or additions are made, or on change of occupancy).

• Monitor plumbing regularly during use and when you are cleaning. Look out for leakage and breakdowns, and check insulation is adequate particularly as winter approaches.

• Lift drain covers annually to check for blockages and clean these as necessary. Check any private drainage systems annually, and arrange for a qualified contractor to clear these as necessary. Keep gullies free from debris.

Grounds

• Garages and outbuildings: Follow the maintenance advice given for the main building.

• Other: Regularly prune trees, shrubs and hedges as necessary. Look out for any overhanging and unsafe branches, loose walls, fences and ornaments, particularly after storms. Clear leaves and other debris, moss and algae growth. Make sure all hard surfaces are stable and level, and not slippery or a trip hazard.
Part C: The report form and checklists

This part reproduces the report form, which consists of the following sections:

A  Introduction to the report
B  About the inspection
C  Overall opinion and summary of the condition ratings
D  About the property
E  Outside the property
F  Inside the property
G  Services
H  Grounds (including shared areas for flats)
I  Issues for your legal advisers
J  Risks
K  Valuation
L  Surveyor’s declaration

What to do now
Description of the RICS HomeBuyer Service
Typical house diagram

This part also supplies checklists for sections B, C, D, E, F, G, H, I, J and K, along with specific guidance for each of them. These checklists include items that should be considered by the surveyor at each inspection, as well as their description and some instruction.

RICS is the world’s leading qualification when it comes to professional standards in land, property and construction.

In a world where more and more people, governments, banks and commercial organisations demand greater certainty of professional standards and ethics, attaining RICS status is the recognised mark of property professionalism.

Over 100,000 property professionals working in the major established and emerging economies of the world have already recognised the importance of securing RICS status by becoming members.

RICS is an independent professional body originally established in the UK by Royal Charter. Since 1868, RICS has been committed to setting and upholding the highest standards of excellence and integrity – providing impartial, authoritative advice on key issues affecting businesses and society.

The RICS HomeBuyer Report is reproduced with the permission of the Royal Institution of Chartered Surveyors who owns the copyright.

© 2010 RICS
Introduction to the report

This HomeBuyer Report is produced by an RICS surveyor who has written this report for you to use. If you decide not to act on the advice in this report, you do this at your own risk.

The HomeBuyer Report aims to help you:

• make a reasoned and informed decision on whether to go ahead with buying the property;
• make an informed decision on what is a reasonable price to pay for the property;
• take account of any repairs or replacements the property needs; and
• consider what further advice you should take before committing to purchase the property.

Any extra services we provide that are not covered by the terms and conditions of this report must be covered by a separate contract.

If you want to complain about the service, please refer to the complaints handling procedure in the ‘Description of the RICS HomeBuyer Service’ at the back of this report.
B About the inspection

Surveyor’s details
The surveyor should provide his or her name, RICS membership number and company name in the boxes provided, which will also be re-supplied in section K. However, contact details are to be provided in section L only.

Date of the inspection and report reference number
The date that the property was inspected is provided in the box to the left, and the allocated report reference number is given in the box to the right.

Related party disclosure
The surveyor should declare any potential conflicts and how these are managed in accordance with the Red Book and RICS Rules of Conduct.

For example, where the surveyor and the estate agent selling the property are within the same group of companies, a managed conflict is permitted where the surveyor and the estate agents are separately constituted companies with different directors.

Full address and postcode of the property
The full address and postcode of the property should be included.

Weather conditions when the inspection took place
This should include what the weather conditions were like at the time of inspection.

The status of the property when the inspection took place
In this field the surveyor should state any limitations (major only, where relevant), such as:

- Occupied/furnished/floor coverings
- Construction not apparent
- Locked room/garage
- Overgrown grounds
- Other exceptional circumstances
- Extent of external inspection (for flats).

The surveyor should report concealed parts of the building and inaccessible spaces (e.g. roof/underfloor), or if a ‘head and shoulder’ only inspection was done, in the box provided directly for relevant headings in sections E, F and G.
About the inspection

RICS HomeBuyer Report...
About the inspection (continued)

We inspect the inside and outside of the main building and all permanent outbuildings, but we do not force or open up the fabric. We also inspect the parts of the electricity, gas/oil, water, heating and drainage services that can be seen, but we do not test them.

To help describe the condition of the home, we give condition ratings to the main parts (the ‘elements’) of the building, garage and some parts outside. Some elements can be made up of several different parts.

In the element boxes in parts E, F, G and H, we describe the part that has the worst condition rating first and then briefly outline the condition of the other parts. The condition ratings are described as follows.

<table>
<thead>
<tr>
<th>Condition Rating</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Defects that are serious and/or need to be repaired, replaced or investigated urgently.</td>
</tr>
<tr>
<td>2</td>
<td>Defects that need repairing or replacing but are not considered to be either serious or urgent. The property must be maintained in the normal way.</td>
</tr>
<tr>
<td>1</td>
<td>No repair is currently needed. The property must be maintained in the normal way.</td>
</tr>
<tr>
<td>NI</td>
<td>Not inspected (see ‘Important note’ below).</td>
</tr>
</tbody>
</table>

The report covers matters that, in the surveyor’s opinion, need to be dealt with or may affect the value of the property.

**Important note:** We carry out a non-disruptive visual inspection externally from ground level and internally from floor level. We inspect roofs, chimney heads and other surfaces on the outside of the building where they are readily visible from ground level and, if necessary, from neighbouring public property where accessible. Internally, this means that we do not lift carpets or floor coverings of floorboards, or move heavy furniture, stored items and insulation. We do not remove fixed covers or hatches.

We inspect the roof structure from inside the roof space. We also visually inspect the roof space where there is safe and reasonable access, normally defined as being from a 3 metre ladder within the property. If this is not possible, we will use other means to access the roof space if we deem it safe and reasonable to do so. We do not open fixed hatches, or move or lift insulation material, stored goods or other contents.

We inspect floor surfaces, and where possible, sub-floor areas. These are inspected only to the extent visible from a readily accessible and unlimited hatch by way of an inverted ‘head and shoulders’ inspection at the access point. Physical access to the sub-floor area may be taken, if we deem it safe and reasonable to do so, and may be subject to a minimum clearance of 1 metre between the underside of floor joists and the solum as determined from the access hatch. We do not open fixed hatches.

We are not able to assess the condition of the inside of any chimneys, boiler or other flues, nor are we able to comment on areas that are inaccessible or concealed. If areas are not visible that would normally be inspected, these are identified and further investigation may be needed by a specialist contractor.

We do not report on the cost of any work to put right defects or make recommendations on how these repairs should be carried out. Some maintenance and repairs we suggest may be expensive. Other matters may be reported where we judge this to be helpful and constructive.

Please read the ‘Description of the RICS HomeBuyer Report Service’ (at the back of this report) for details of what is, and is not, inspected.

Property address

RICS HomeBuyer Report...
C Overall opinion and summary of the condition ratings

The main function of this section of the report is to provide:

- the surveyor’s overall opinion of whether the property is a reasonable proposition to purchase at the agreed or suggested price, and on particular features that affect its current value; and
- tables identifying condition ratings applied to elements, which are organised in order of severity being 3, 2 and 1, and respectively colour-coded red, amber and green for ease of recognition, with only the worst rating per element being inputted in the tables.

The surveyor’s overall opinion of the property

The surveyor should use this section to report conclusions. As mentioned earlier, these should include the surveyor’s opinion of whether the property is a reasonable proposition to purchase, and on any particular features that affect its present value. The opinion takes no account of factors outside the scope of the HBS.

The overall opinion should help the client keep the detailed facts and advice that follow in the report in perspective.

Condition rating table

The table shows the condition ratings given in the elemental condition rating box for each element in sections E, F, G and H.

It is essential that the table of condition ratings contains each and every elemental condition rating shown in the condition rating boxes in sections E, F, G and H (part). (Although the software program will populate the entries and colour coding in the condition rating boxes automatically, the surveyor should check to ensure that no condition rated element is overlooked.)
Overall opinion and summary of the condition ratings

This section provides our overall opinion of the property, and summarises the condition ratings of the different elements of the property.

If an element is made up of a number of different parts (for example, a pitched roof to the main building and a flat roof to an extension), only the part in the worst condition is shown here.

To make sure you get a balanced impression of the property, we strongly recommend that you read all sections of the report, in particular the "What to do now" section.

Our overall opinion of the property

Property address
D About the property

Type of property
A concise description of the type of property should be provided, including the number of storeys.

If it is a flat or maisonette, the surveyor states so here and then provides further information in the box called ‘Information relevant to flats and maisonettes’, given later in this section.

The approximate compass point direction that the front of the property faces should be stated here.

Approximate year the property was built
The surveyor states the year or approximate year the home was built.

Approximate year the property was extended
The surveyor reports whether the property home has or has not been extended, as well as the year or approximate year the extension(s) was built, if present.

Approximate year the property was converted
The surveyor states whether a property has or has not been converted, along with the year or approximate year it was converted, if applicable.

Information relevant to flats and maisonettes
The surveyor indicates if the flat or maisonette is in a converted or purpose-built building and specifies:
- The floor of block
- Number of flats in block
- Access.

Accommodation
The number of rooms in current use should be entered floor by floor in the table provided. If there is a floor that does not fit into the categories mentioned (e.g. mezzanine), this can be named in the cross-section of the ‘Other’ row and the ‘Name of other’ column.

Construction
This concise paragraph must include description of:
- Roofs
- Walls
- Floors.

Energy
The surveyor may obtain the details of the current energy-efficiency and environmental impact ratings, as stated on the EPC, on the home and puts them in the boxes provided. No further comment is provided.

Caution is needed that the surveyor does not put in the potential ratings, which are also stated on the EPC. If no EPC is available, ‘Not available’ is inputted in boxes. No further enquiries have to be made.

A disclaimer is included in the report to make it clear to the client and the latter’s advisers that the surveyor has not checked these ratings and so cannot comment on their accuracy.

Mains services
The surveyor marks the boxes to indicate which services are present and reports in more detail in section G Services.

Central heating
The surveyor marks the box(es) to indicate which type of system is available, or marks the ‘None’ box if there is no central heating, and reports in more detail in section G.

Other services or energy sources (including feed-in tariffs)
This box is used to state any other service or energy source present at the property, such as:
- Septic tank
- Wind turbine
- Solar panel(s)
- Heat pump(s)
- Any others.

Where the surveyor is aware of feed-in tariffs, these should be commented on here and cross referred to section I3 Other matters for the client’s legal advisers to confirm all liabilities and obligations.

Grounds
This section requires a concise description only. Full details can be given in section H on the following:
- Garage(s) – position (state if none)
- Gardens
- Outbuildings (type and location)
- Leisure buildings (type and location).
**Location, facilities and local environment**

Comments here are to be based on the surveyor’s inspection and local knowledge.

**Location**

Comments on location should not include reference to grounds, which are covered in section H. Instead, the surveyor should focus on:

- Situation
- Type of area
- Character of neighbourhood
- Source(s) of inconvenience or disturbance (e.g. school traffic, crowds, industry, public house)
- Road(s)/paths (adopted/private and traffic volume).

**Facilities**

The surveyor reports on nearby facilities, such as:

- Shops
- Bus routes/railway station
- Schools.

**Local environment**

Physical factors such as flood risk, radon, electromagnetic fields, mining, clay sub-soils and muncid must be reported here and cross referred to section J Risks.

No enquiries need to be made to determine whether a building is listed or located within a conservation area. However, if the surveyor is aware that the property is so classified, this must be reported here and reference made to this in section I Issues for your legal advisers.

### Construction

**Property address**
About the property (continued)

Energy
We may not have prepared the Energy Performance Certificate (EPC). If that is the case then the figures stated have simply been lifted from the certificate that was exhibited to us and does not in any form confirm that they are correct, nor does it attach any liability to us.

We are advised that the property’s current energy performance, as recorded in the EPC, is:

Energy-efficiency rating

Environmental impact rating

Mains services
The marked boxes show that the mains services are present.

- Gas
- Electricity
- Water
- Drainage

Central heating

- Gas
- Electric
- Solid fuel
- Oil
- None

Other services or energy sources (including feed-in tariffs)

Grounds

Location

Facilities

Local environment

Property address
E Outside the property

Outside the property relates to the external elements of the building. The client and the latter’s advisers will clearly recognise this from the headings within the section.

The surveyor should inform the client and the advisers of any limitations to inspection of the property and give reasons for this in the text box at the top of the page – i.e. where an element(s) or part(s) of which would normally be inspected within the terms of conditions but could not due to various reasons (e.g. roof covered in snow, chimney stack hidden from view). If further comment is required it can be included within the appropriate element text box.

For flats, the outside surfaces of the building containing the property are visually inspected only to the extent that the surveyor is able to give an opinion on the general condition.

External decorations are considered as part of the element and its normal maintenance. Therefore, the surveyor comments on them in the elemental text box as appropriate.

Surveyors must apply a condition rating to each element and report on the following.

E1 Chimneyheads
They are visually inspected, with the aid of binoculars where appropriate:

- Coping/pointing
- Pots
- Type and condition of stacks (leaning and sulphate attack)
- Pointing, render and other finishes
- Flashings and soakers at the junction with the roof covering (but not including the roof covering).

E2 Roof coverings

Pitched roof
This is visually inspected with the aid of binoculars where appropriate.

- Type of covering and condition including the slope of the roof and fixing of tiles, slates
- Roofing felt – presence, type, condition
- Ridges and hips tiles
- Verge and eaves details

- Open valleys
- Valley gutters (‘butterfly’ roofs), parapets gutters and their lining and outlets
- Lead flashings to up-stands, dormers, etc. (but not the chimney flashings)
- Roof lights
- Dormers (usually including the flat or pitched roof over the feature).

Flat roof
This is visually inspected from vantage points within the property and/or using a ladder externally, where there is safe and reasonable access to a flat roof(s), not more than 3 metres above ground level.

- Type of covering and condition, including the falls on the roof
- Lead flashings to up-stands (but not the chimney flashings)
- Verge and eaves details
- Any integral gutters
- Roof lights
- Any party wall issues arising from chimney condition.

E3 Rainwater pipes and gutters
They are visually inspected with the aid of binoculars where appropriate.

This element includes:

- Gutters and gutter supports (valley and parapet gutters to be included in E2 Roof coverings)
- Hopper heads
- Rainwater downpipes, bends, swan necks, off-sets
- Rainwater shoes.

This element ends:

- Where it joins foul pipework and becomes a combined system
- Where it discharges into, or over, a gully, or
- Over the ground.

Issues include:

- Type and condition
- General comment on adequacy, including
  - Falls to gutters
  - Position of outlets, hopper heads, etc.
  - Numbers of downpipes.
**E4 Main walls**
They are visually inspected with the aid of binoculars where appropriate, although foundations and concealed parts are not exposed or inspected.
- Type, thickness and general condition of the wall(s)
- Wall ties
- Pointing
- Rendering/external finishes
- Cladding
  - Where it is integral to walling (e.g. part of a sandwich construction), it is reported here
  - Where it is ‘surface’ fixed to the walling, then it should be included in E8 Other joinery and finishes
- Damp proof course – type, position and condition
- Presence of dampness to the inside face of the outside wall, including that from rising and penetrating dampness and condensation
- Type and condition of the lintels, jambs and sills
- Parapet walls and copings, including party up-stand walls
- Timber frame
- Level of insulation to the wall.

**E5 Windows**
A sample of windows is to be opened and closed where possible, but not forced open.
- Type and general condition
- Single/double/secondary glazing
- Damp penetration
- Seals to double glazed units/misting
- Replacement window issues
- Escape in the case of fire
- Listed building consent/conservation area.

**E6 Outside doors (including patio doors)**
Outside doors are to be opened and closed where keys are available, but not forced open.
- Type and condition
- Damp penetration
- Seals to double glazed units/misting
- Listed building consent/conservation area.

**E7 Conservatory and porches**
They are visually inspected.
- Type and condition
- Building regulation and/or planning approval
- Inappropriate use
- Listed building consent/conservation area.

**E8 Other joinery and finishes**
They are visually inspected with the aid of binoculars where appropriate.
- Type and condition
- Fascias, soffits and eaves details generally
- Bargeboards and verge details generally
- Ornamental joinery (e.g. finials, mock Tudor panelling)
- Timber and PVC cladding fixed to main walling
- Condition of decorations to all joinery elements.

**E9 Other**
This category is used for external elements that require reporting but do not sit comfortably elsewhere in section E. These elements should be visually inspected with the aid of binoculars where appropriate.

Typical examples include:
- Roof terraces, useable flat roof areas over other accommodation
- Balconies
- Bay windows, but only where distinctive and different in nature to the construction of the main walls
- External stairways or fire escapes.

To give a complete appraisal of the feature, this section should cut across other elements, but only where appropriate. For example, a section on a balcony may report on:
- Structural aspects (e.g. fixings, support)
- Walls and floor to the balcony
- Railings and handrails.

Rather than trying to fit these within the elemental structure of the report, it may be clearer to include all aspects here.

Legal/permission issues should be cross referred to section I.
**Outside the property**

Property address: [ ]
F Inside the property

Inside the property relates to the internal elements of the building. The client and the latter’s advisers will clearly recognise this from the headings within the section.

The surveyor should inform the client and the advisers of any limitations to inspection of the property and give reasons for this in the text box at the top of the page – i.e. where an element(s) or part(s) of which would normally be inspected within the terms of conditions but could not due to various reasons (e.g. room full of stored items, door to room locked, no access hatch to roof space). If further comment is required it can be included within the appropriate element text box.

Internal decorations are considered as part of the element and its normal maintenance. Therefore, the surveyor comments on them in the elemental text box as appropriate.

The surveyor must apply a condition rating to each element and report on the following checklist items.

F1 Roof structure

The roof space is entered using a ladder where there is safe and reasonable access via hatches not more than 3 metres above floor level. If this is not possible, then physical access to the roof space may be taken by other means, if the surveyor deems it is safe and reasonable to do so. The roof structure is visually inspected from within the roof space. Fixed hatches are not opened, and insulation material, stored goods and other contents are not moved or lifted.

This element includes:

- Design, construction and condition
- Alteration of the roof structure to create useable space (this is to be included here when the owner has partially altered the roof space for limited use, e.g. providing flooring for additional storage, etc., while a complete room-in-a-roof conversion should be reported in F9 Other)
- Roof strengthening and lateral restraint
- Use and misuse of the roof space
- Wood rot and wood boring beetle
- Party walls – lack of fire breaks, gaps between dwellings
- Flooring in, and access into, the loft
- Ventilation in roof space
- Level of insulation
- Birds, bats, vermin, insects
- Unsupported chimney breast(s) (report in F5 Fireplaces, chimney breasts and flues).

Flats

This is inspected as above, including communal roof space, but only if access can be readily gained from communal areas or from within the property being inspected.

F2 Ceilings

They are visually inspected from floor level.

- Type and condition
- Dampness to surfaces, including condensation mould growth
- Cracking to plasterwork.
- Finishes, including decorations
- Asbestos containing materials (cross refer to section J).

F3 Walls and partitions

Both are visually inspected from floor level. Using a damp meter, walls are randomly tested for dampness where considered appropriate.

- Type and condition
- Structural movement, cracking, distortion, binding doors
- Non-robust partitions
- Possible asbestos content
- Finishes, including decorations
- Structural alterations – through lounge, new door openings, etc.
- Dampness to internal walls.

F4 Floors

Surfaces of exposed floors are visually inspected. No carpets, floor coverings or floorboards are lifted or furniture moved. Physical access to the subfloor may be taken, if deemed safe and reasonable to do so, and may be subject to a minimum clearance of 1 metre between the underside of the floor joists and the solum as determined from the access hatch. Fixed hatches are not opened.
• Type and condition (floor by floor)
• Solid floor
• Suspended timber floor
  – Stamp test
  – Ventilation to subfloor void
• Floor finishes and their construction
• Dampness to all floor types
• Wood rot and wood boring insects.

F5 Fireplaces, chimney breasts and flues
These are visually inspected, but no testing of flues or fittings is carried out. Gas and oil heaters/fires are to be included in G4 Heating, as should balanced flues attached to, or extending a short distance from, the heating appliance. This element includes the chimney breast from the lowest level in the house, through all rooms and through any roof space and finishes at the underside of the roof covering. The element changes to E1 Chimneyheads when above the roof covering, where it becomes an external element.

• Types and condition
• Open, solid fuel fireplaces
  – Flue/chimney maintenance, etc.
  – Chimney breasts
  – Open or blocked off
  – Ventilation of flue (if blocked)
  – Top of flue at chimney level
  – Condition of them in roof space
  – Structural alterations, unsupported
  – Dampness to base and face of them
• Flues
  – Traditional chimney breasts or built-in prefabricated flues
  – Vertical open flues not contained within a chimney, including description, fixing, condition, terminal position, proximity to combustible materials, etc.
• Possible asbestos materials (cross refer to section J).

F6 Built-in fittings (built-in kitchen and other fittings, not including the appliances)
Built-in cupboards are looked into, but no stored items are moved. Kitchen units are visually inspected excluding appliances.

• Description, adequacy and general condition
• Kitchen units, cupboards and worktops, but not the splash back tiling (see F3 Walls and partitions)
• Kitchen sink and the water pipes to them (see G3 Water)
• Slotted wastes, but not the trap or the waste pipe (G6 Drainage).
• Dampness affecting the features described above
• Wood boring insects affecting the features described above.

F7 Woodwork (for example, staircase and joinery)
Visually inspected, with internal doors to be opened and closed where keys are available, but not forced open. A general comment is provided on the following:

• Description and general condition
• Internal doors, frames/linings, architraves, etc.
• Asbestos containing backing to cupboard/older fire doors (cross refer to section J)
• Internal parts of windows – jamb linings, sill boards, architraves, shutters, etc.
• Built-in cupboards (e.g. within chimney alcoves, meter cupboards)
• Skirtings, dado rails, picture rails
• Staircases – treads and risers, strings, balusters, handrails, newel posts
• Finishes, including decorations
• Dampness affecting the features described above
• Wood rot and wood boring beetle affecting the features described above.

F8 Bathroom fittings
These are visually inspected, but no tests whatsoever are to be carried out on the appliances. The surveyor provides a description of the adequacy and general condition.

• Baths
• Bidets
• Wash hand basins, their taps and slotted wastes
• Shower trays
• Shower cubicles
• Water closets (WC), their cisterns and overflows, including the actual junction between the WC outgo and the drainage pipe, but not the drainage pipe itself
• Bath panels and other built-in fittings associated the sanitary appliances.

Inspection does **not** to include:
• Water pipes that connect to the taps, mixing valves, etc. (see G3 Water and G5 Water heating)
• Water traps and waste pipes that drain them (see G6 Drainage)
• Any electric showers or instant electric water heaters (see G3 Water heating and G1 Electricity)
• Wall tiling/splash back tiles (see F3 Walls and partitions)
• Leaks and dampness caused by the bathroom fittings
• Wood rot and wood boring insects affecting the features described above.

**F9 Other**
This category is used for external elements that require reporting but do not sit comfortably elsewhere in section F. These elements should be visually inspected. The following headings give suggestions of what could typically be included here.

*Rooftop space conversion*
Although this can be reported in F1 Roof structure, this section should be used where a total conversion has been carried out. To give a complete appraisal of the conversion, this section should cut across other elements, but only where appropriate. For example, issues to be considered and reported on might typically include:

• Structural aspects – alteration of roof, strengthening of ceilings and other floors
• Access to room – adequacy and safety of staircase, etc.
• Thermal insulation – ventilation to roof spaces
• Regulation and permissions – building regulation, planning permission, etc.
• Any asbestos containing materials (cross refer to section J)
• Legal/other permission issues (cross refer to section I).

*Cellars and basements*
They require a similar approach to rooftop space conversion. To make reporting clearer, where the cellar/basements are used for habitable purposes, this section should cut across other elements, but only where sensible. This might typically include:

• Structural aspects – removal of partitions, strengthening of ceilings and other floors
• Access to room – adequacy and safety of staircase, etc.
• Daylight and ventilation to rooms and spaces
• Dampness
• Legal/permission issues (cross refer to section I)
• Asbestos containing materials (cross refer to section J).

*Flats*
The inspection includes those internal common parts of a block, such as:

• Internal hallways, landings and stairs
• Doors
• Built-in cupboards, meter cupboards, etc.
• Asbestos containing materials (cross refer to section J).

Property address
G Services

The services are visually inspected. The surveyor does not assess any services to make sure they work efficiently and safely, or comply with current regulations.

The surveyor should inform the client and the latter’s advisers of any limitations to inspection of the property and give reasons for this in the text box at the top of the page – i.e. where an element(s) or part(s) of which would normally be inspected within the terms of conditions but could not due to various reasons (e.g. meters inaccessible). If further comment is required it can be included within the appropriate element text box.

If any services are turned off, the surveyor states that in the report and does not turn them on. A condition rating must be applied to each of the services and comments made on the following elements.

G1 Electricity

Accessible parts of the wiring are visually inspected without removing or undoing fittings. No tests whatsoever are carried out to the system or appliances. The following statement is printed at the start of G1:

Safety warning: The Electrical Safety Council recommends that you should get a registered electrician to check the property and its electrical fittings at least every ten years, or on change of occupancy. All electrical installation work undertaken after 1 January 2005 should have appropriate certification. For more advice contact the Electrical Safety Council.

Subsequent reporting should not contradict this.

The surveyor should describe the installation and its general condition including:

- Mains supply
- Residual current device (RCD) or miniature circuit breakers (MCB)
- On-peak/off-peak
- Location of the meter and consumer unit/fuse board
- Supplementary bonding in the usual places
- Condition of visible wiring
- Condition of a sample of the range of light fittings and switch gear
- Fixed electrical appliances, including heaters, storage radiators, electric showers, instant water heaters, etc. (see also G5 Water heating)
- Nature of electrical fittings bath and shower rooms
- External installations, such as garages, outbuildings, external sockets, garden lighting, water feature pumps, etc.

The surveyor should check if a recent Periodic Inspection Report (PIR) is available.

G2 Gas/oil

Accessible parts of the system(s) are visually inspected without removing or undoing fittings. No tests whatsoever are carried out to the system(s) or appliances.

The following statement is printed at the start of G2:

Safety warning: All gas and oil appliances and equipment should be regularly inspected, tested, maintained and serviced by a registered ‘competent person’ and in line with the manufacturer’s instructions. This is important to make sure that all the equipment is working correctly, to limit the risk of fire and carbon monoxide poisoning, and to prevent carbon dioxide and other greenhouse gases from leaking into the air. For more advice contact the Gas Safe Register for gas installations, and OFTEC for oil installations.

Subsequent reporting should not contradict this.

The surveyor reports:

- Description and general condition
- Evidence of installation/alteration certification, annual inspections and reports for all types of installation.

This section covers the gas and oil supply pipework from the utility company’s supply (or the storage vessel) through to the heating appliance itself. However, all matters relating to the appliance are to be reported in G4 Heating.

Mains gas installations

- Does it have a mains supply and is it connected?
• How is the meter location and condition?
• What is the route, nature and condition of the pipework?
• Have there been alterations? Are they properly certified?

**Liquid petroleum gas installations**
• Storage cylinders: Is the location suitable?
  - Boundaries
  - Proximity to buildings (especially basements)
  - Other storage tanks
  - Condition
  - Foliage.
• What is the route, nature and condition of the pipework?
• Have there been alterations? Are they properly certified?

**Oil installations**
The surveyor reports on oil storage facility details, including:
• Siting
• Nature of the tank – internal or external bunded
• Condition of tank
• Proximity to dwelling, boundaries, watercourses, drains, etc.

**G3 Water**
Accessible parts of the system are visually inspected without removing or undoing fittings. No tests whatsoever are carried out for the system or appliances.

This element **does include:**
• Rising main supply to combination boilers, water heaters, feed and expansion tanks but not beyond them
• Rising main supply to cold water storage tanks, direct to kitchen and sanitary appliances, but not the taps to which they connect
• Cold water storage tanks (possible asbestos containing materials to be cross referred to section J), lids, bases, associated overflows and vents
• Cold water distribution pipes from storage tanks to appliances.

This element **does not include:**
• Hot water system (see G5 Water heating)
• Hot water cylinder, expansion pipe, immersion heaters, cylinder thermostats and all distribution pipework between cylinder and the appliances
• Distribution pipework between the water heating appliances and the various appliances.

Main issues to include are:
• Description and general condition
• Source of supply
  - Mains supply
  - Mains and private supply combined
  - Private supply only (If present, has it been checked and certified as wholesome?)
• Shared supply with neighbours
• Position of internal stop valve
• Presence of lead pipework
• Nature of the pipework, dissimilar materials
• Storage tanks, overflow pipes, etc.
• Use of asbestos containing materials (cross refer to section J).

**G4 Heating**
Accessible parts of the system are visually inspected apart from communal systems, which are not inspected. No tests whatsoever are carried out to the system or appliances.

This element includes:
• Main heating source
  - Boilers (and combination boilers that also provide hot water)
  - Gas and oil fires and heaters
  - Electric heating
  - Heat pumps
  - Heat distribution pipework and associated heat emitters (e.g. under-floor heating), and the possible use of asbestos containing materials (cross refer to section J)
• Ancillary equipment
  - Heating controls/thermostatic radiator valves (TRVs)
  - Expansion vessels and safety controls
• Ventilation issues for heating appliances (where there are concerns, cross refer to section J).
Solid fuel heating source should be covered in F5 Fireplaces, chimneys and flues. Any distribution pipework should be covered here for this element.

Most heating appliances will be subject regulations governing installation of gas, oil, solid fuel and electric appliances previously described. The surveyor should cross refer to the appropriate section where certification is required.

**G5 Water heating**
Accessible parts of the system are visually inspected apart from communal systems, which are not inspected. No tests whatsoever are carried out to the system or appliances.

This element includes:
- Hot water heating appliance where this provides hot water only (e.g. gas water heater, multi-point water heater, electric under-counter heater, etc.), while combination heating and hot water boilers are included in G4 Heating
- Hot water cylinder, expansion pipe, immersion heaters, cylinder thermostats and all distribution pipework between cylinder and the appliances (but not the taps)
- Distribution pipework between the water heating appliances and the various appliances, and the possible use of asbestos containing materials (cross refer to section J).

**G6 Drainage**
This element includes:
- Above ground drainage
  - Traps and wastes from kitchen sinks, washing machines, dishwashers, sanitary appliances, bidets, WCs, showers, etc.
  - Soil and vent pipes and the possible use of asbestos containing materials (cross refer to section J).
  - Stub stacks
  - Air admittance valves, etc.
- Below ground drainage
  - Main drainage – separate system (foul and surface water), combined system
  - Private drainage – cess pit, septic tank, small sewerage treatment system
  - Other types – soak away, reed beds, composting toilets
- Other issues
  - Shared drainage with neighbouring properties (cross refer to section I)
  - Permit to discharge to local water courses, etc.
  - Misconnected drains (see www.connectright.org.uk)
  - Pitch fibre drainage pipes identified in inspection chambers.

**G7 Common services**
The surveyor does not inspect the common services and gives general comment only. This covers services that are specific to flats, including:
- Refuse chutes, bin stores, etc.
- Lifts for passenger and goods
- Enter-phone systems
- CCTV
- Lighting and heating in common areas.
Services

Services are generally hidden within the construction of the property. This means that we can only inspect the visible parts of the available services, and we do not carry out specialist tests. The visual inspection cannot assess the services to make sure they work efficiently and safely, and meet modern standards.

Limitations to inspection

---

**G1 Electricity**

*Safety warning:* The Electrical Safety Council recommends that you should get a registered electrician to check the property and its electrical fittings at least every ten years, or on change of occupancy. All electrical installation work undertaken after 1 January 2005 should have appropriate certification. For more advice contact the Electrical Safety Council.

**G2 Gas/oil**

*Safety warning:* All gas and oil appliances and equipment should regularly be inspected, tested, maintained and serviced by a registered ‘competent person’ and in line with the manufacturer’s Instructions. This is important to make sure that the equipment is working correctly, to limit the risk of fire and carbon monoxide poisoning and to prevent carbon dioxide and other greenhouse gases from leaking into the air. For more advice contact the Gas Safe Register for gas installations, and OFTEC for oil installations.
**H Grounds (including shared areas for flats)**

Surveyors should perform a visual inspection only of the grounds by walking around, where necessary, from adjoining public property.

The surveyor should inform the client and the latter’s advisers of any limitations to inspection of the property and give reasons for this in the text box at the top of the page – i.e. where an element(s) or part(s) of which would normally be inspected within the terms of conditions but could not due to various reasons (e.g. garage door locked, garden overgrown). If further comment is required it can be included within the appropriate element text box.

Only two elements are rated in this section: H1 Garages and H2 Other. Although H2 is normally reserved for ‘other outbuildings’, where a defective external feature will have an impact on the value of the property, a sub-element can be included in H2 and condition rated to emphasise its seriousness.

**H1 Garage**
The garage(s) should be identified and condition rated here, as can all related elements and services. Elements of integral garages (i.e. part of the structural framework of the dwelling) can be included in sections E or F. Typical issues are:
- Type and general condition
- Functionality
- Unauthorised use (cross refer to section I)
- Services – type and condition (cross refer to G1 Electricity)
- Planning/listed building/conservation area issues
- Asbestos containing materials (cross refer to section J).

**H2 Other**
This section normally includes other permanent outbuilding(s) that are not attached to the main dwelling. These must be condition rated and reported. Examples could include:
- Summer houses
- Substantial greenhouses
- Follies
- Leisure buildings, but not the leisure facilities inside (e.g. swimming pools, saunas, fitness gyms, etc.).

Specific defective external features that may affect value must also be condition rated and reported in this section. Examples include:
- Retaining walls in danger of collapsing
- Deeply sunken paths or driveway
- Dilapidated boundary wall or fence.

There must be a clear impact on value, so inclusion in this section is likely to be the exception rather than the rule. Other issues could include:
- Listed building/conservation areas (cross refer to section I)
- Invasive species, e.g. Japanese knotweed (cross refer to section J).

**H3 General**
The surveyor should comment on features within the grounds, such as:
- Retaining walls
- Gardens
- Drives, paths, terraces, patios, steps
- Hardstanding
- Gates
- Trees
- Boundary walls, fences
- Non-permanent outbuildings
- Rights of way.

Where specific external features are defective or in need of repair or replacement, and may impact on value, they must also be reported and condition rated in H2 Other.

Where risks such as contamination or flooding are found, these should be reported and cross referred to section J, where more detail of these should be provided.

**Flats**
The inspection includes common external areas, such as:
- External staircases
- Outbuildings
- Garages
- Parking provision
- Roads and paths
- Boundaries
- Retaining walls
- Asbestos containing materials (cross refer to section J).

I Issues for your legal advisers

The legal advisers are responsible for checking relevant documents. As legal advisers will not normally see the property, the subheadings in section I are intended only for the surveyor to identify apparent and specific items with possible legal implications.

Issues reported elsewhere can be cross-referenced here.

The client is advised that legal advisers may need to investigate further. The checklists provided here give examples of issues that may arise.

I1 Regulation

Typical issues include:

- Planning permission and building regulation approval for an extension or loft conversion
- National House-Building Council (NHBC)/other certificate
- Listed building
- Conservation area.

Listed building/conservation areas

If the surveyor knows or suspects that the property is listed or is located in a conservation area, the client should be advised to discuss the various implications of ownership with legal advisers. If and when repair work is required, the client should be advised to consult someone with appropriate specialist knowledge. If significant repairs or alterations are being contemplated, advice should be sought from the conservation officer.

I2 Guarantees

Typical issues include:

- Timber/damp warranties
- Central heating service record
- Fenestration Self-Assessment Scheme (FENSA) certificate
- Wall ties
- Possible advantage of taking over existing insurance.

I3 Other matters

Here, the surveyor should state tenure if known.
Issues for your legal advisers

We do not act as ‘the legal adviser’ and will not comment on any legal documents. However, if during the inspection we identify issues that your legal advisers may need to investigate further, we may refer to these in the report (for example, check whether there is a warranty covering replacement windows).

Property address:
J Risks

The purpose of section J is to draw the client’s attention to property related risks.

Risks include defects that need repairing or replacing, as well as defects that have existed for a long time and cannot reasonably be changed, but may present a risk.

Defects reported in the appropriate sections in E, F, G and H should be identified, described, condition rated and emphasised here as a cross-referenced headline. This section can also be used to cover any risks/hazards that may impact upon the value of the property and which are identified as ‘Other considerations affecting value’ in section K.

In the case of contamination or landfill, there is a general assumption that there are no hazardous or damaging materials, that there is no contamination in or from the ground or that the ground has not been landfilled. The surveyor only reports if the latter observes, has reason to suspect or otherwise becomes aware of any contamination.

Examples of issues to consider are as follows:

- Structural movement
- Dampness
- Timber defects
- Mundic
- Non-traditional construction
- Radon
- Flooding
- Mining
- Invasive species, e.g. Japanese knotweed (cross refer to section H)
- Asbestos
- Safety issues, including:
  - Lead water pipes (cross refer to section G)
  - Dangerous electrics
  - Unsafe parts of building
  - Absence of test certificates for services/appliances/water supply
  - Inappropriate use of accommodation (e.g. non-conforming roof space conversion)
  - Overhead power lines (EMFs)
  - High radon levels
- Impact of planning proposal, only if known at time of inspection.
- Proximity to source of intrusive noise or smell.
Risks

This section covers defects that need repairing or replacing, as well as defects that have existed for a long time and cannot reasonably be changed, but may present a risk or hazard. If the defects affect specific elements, they will be referred to in the individual section. Other risks or hazards that materially affect value are also reported.

Property address
K Valuation

Market Value
The definition of Market Value (MV) is:

The estimated amount for which a property should exchange on the date of valuation between a willing buyer and a willing seller in an arm’s-length transaction after proper marketing wherein the parties had each acted knowledgeably, prudently and without compulsion (International Valuation Standards Council, 2007).

For more information concerning Market Value according to IVSC, see PS 3.2 in the 6th edition of the Red Book.

Statement
Boxes are provided for the surveyor to record the date of the valuation and state an opinion on the Market Value (in pounds) of the property as inspected first in figures, followed by the same amount in words.

Tenure
The surveyor should state the tenure in the box provided. Further details are provided in section I.

Area of property
The surveyor should state the approximate area of the accommodation in square metres (sq m) in the box provided and include whether the area has been calculated on a gross external area (GEA) or gross internal area (GIA) basis. The surveyor must understand and use the Code of measuring practice, 6th edition (RICS, 2007), appreciating inclusions, exclusions and treatment of garages and other outbuildings.

Insurance cover (reinstatement cost)
The surveyor’s estimate of the reinstatement cost should be given in figures, as well as in words, in the boxes provided. The surveyor is expected to understand, use and reference (as appropriate) the independent information on rebuilding costs produced by the Building Cost Information Service (BCIS) of RICS and the ABI/BCIS House Rebuilding Cost index (see abi.bcis.co.uk).

In the case of flats and maisonettes, the estimate is made on the assumption that the property is insured under a satisfactory policy covering the whole building. In the case of a block of flats, the reinstatement figure represents the flat inspected, not the entire block. An allowance is made for common areas but the figure does not include a rate for reinstatement of the entire common area.

Assumptions
Guidance on the use of ‘assumptions’ and ‘special assumptions’ is given in the Red Book in appendices 2.2 and 2.3, respectively. The assumptions as set out in the report are also based on those in paragraph 5.4 of the UK appendix 3.2, RICS mortgage valuation specification, in the Red Book.

Any additional assumptions relating to the valuation are to be reported in the box provided. These may include special assumptions. Examples of these circumstances are:

- Rights of access and egress over all communal estate roadways, pathways, corridors, stairways and use of communal grounds, parking areas and other facilities
- Where a bid from a special purchaser has been made
- Where an interest cannot be offered freely and openly in the market
- Part/shared ownership
- Where a building is being refurbished or altered
- Where there is an anticipated change in the mode of occupation
- Subject to outcome of further investigation.

In some cases the surveyor will not feel able to reach necessary conclusions with reasonable confidence and will therefore include in the report a caveat or recommendation for further investigation (see Part A, subsections 2.7 and 4.5). In such cases, it may be appropriate for the surveyor to provide the valuation on a special assumption as to the outcome of further recommended investigation, or to defer providing the valuation until the results of such further investigation are available.

Other considerations affecting value
These are matters (frequently environmental) that the client cannot influence in the same way as defects to elements of the property which are condition rated, but that may have an impact on Market Value.
Examples include:

- Area prone to flooding
- Location beneath a flight path
- Possible impact of planning proposal (e.g. building an extra runway at a nearby airport)
- Proximity to source of intrusive noise, smell, etc. (e.g. pub, busy road, railway, pig farm, industrial plant).

These are best expressed as bullet points in the box provided, as they relate to the valuation of the property rather than the assessment of the condition of the building. However, the surveyor also has the option to report any such consideration in more detail in section J and refer to it in the overall opinion.
Valuation

In my opinion the Market Value on  as inspected was:

£

(amount in words)

Tenure

Area of property (sq m)

In my opinion the current reinstatement cost of the property (see note below) is:

£

(amount in words)

In arriving at my valuation, I made the following assumptions.

With regard to the materials, construction, services, fixtures and fittings, and so on I have assumed that:

• an inspection of those parts that I could not inspect would not identify significant defects or a cause to alter the valuation;
• no dangerous or damaging materials or building techniques have been used in the property;
• there is no contamination in or from the ground, and the ground has not been used as landfill;
• the property is connected to, and has the right to use, the mains services mentioned in the report, and
• the valuation does not take account of any furnishings, removable fittings or sales incentives.

With regard to legal matters I have assumed that:

• the property is sold with ‘vacant possession’ (your legal advisers can give you more information on this term);
• the condition of the property, or the purpose the property is or will be used for, does not break any laws;
• no particularly troublesome or unusual restrictions apply to the property, that the property is not affected by problems which would be revealed by the usual legal inquiries and that all necessary planning permissions and Building Regulations consents (including consents for alterations) have been obtained and complied with; and
• the property has the right to use the mains services on normal terms, and that the sewers, mains services and roads giving access to the property have been ‘adopted’ (that is, they are under local-authority, not private, control).

Any additional assumptions relating to the valuation

Your legal advisers, and other people who carry out property conveyancing, should be familiar with these assumptions and are responsible for checking those concerning legal matters.

My opinion of the Market Value shown here could be affected by the outcome of the enquiries by your legal advisers (section 6) and/or any further investigations and quotations for repairs or replacements. The valuation assumes that your legal advisers will receive satisfactory replies to their enquiries about any assumptions in the report.

Other considerations affecting value

Note: You can find information about the assumptions I have made in calculating this reinstatement cost in the ‘Description of the RICS HomeBuyer Service’ provided. The reinstatement cost is the cost of rebuilding an average home of the type and style respected to its existing standard using modern materials and techniques, and by acting in line with current Building Regulations and other legal requirements. This will help you decide on the amount of buildings insurance cover you will need for the property.
Surveyor’s declaration

“I confirm that I have inspected the property and prepared this report, and the Market Value given in the report.”

RICS

RICSS HomeBuyer Report...
What to do now

Getting quotations
The cost of repairs may influence the amount you are prepared to pay for the property. Before you make a legal commitment to buy the property, you should get reports and quotations for all the repairs and further investigations the surveyor may have identified.
You should get at least two quotations from experienced contractors who are properly insured.
You should also:
• ask them for references from people they have worked for;
• describe in writing exactly what you will want them to do; and
• get the contractors to put the quotations in writing.
Some repairs will need contractors with specialist skills and who are members of regulated organisations (for example, electricians, gas engineers, plumbers and so on). Some work may also need you to get Building Regulations permission or planning permission from your local authority.

Further investigations
If the surveyor is concerned about the condition of a hidden part of the building, could only see part of a defect or does not have the specialist knowledge to assess part of the property fully, the surveyor may have recommended that further investigations should be carried out to discover the true extent of the problem.

Who you should use for these further investigations
You should ask an appropriately qualified person, though it is not possible to tell you which one. Specialists belonging to different types of organisations will be able to do this. For example, qualified electricians can belong to five different government-approved schemes. If you want further advice, please contact the surveyor.

What the further investigations will involve
This will depend on the type of problem, but to do this properly, parts of the home may have to be disturbed and so you should discuss this matter with the current owner. In some cases, the cost of investigation may be high.

When to do the work
The condition ratings help describe the urgency of the repair and replacement work. The following summary may help you decide when to do the work:
• Condition rating 2 – repairs should be done soon. Exactly when will depend on the type of problem, but it usually does not have to be done right away. Many repairs could wait weeks or months, giving you time to organise suitable reports and quotations.
• Condition rating 3 – repairs should be done as soon as possible. The speed of your response will depend on the nature of the problem. For example, repairs to a badly leaking roof or a dangerous gas boiler need to be carried out within a matter of hours, while other less important critical repairs could wait for a few days.

Warning
Although repairs of elements with a condition rating 2 are not considered urgent, if they are not addressed they may develop into defects needing more serious repairs. Flat roofs and gutters are typical examples. These can quickly get worse without warning and result in serious leaks. As a result, you should regularly check elements with a condition rating 2 to make sure they are not getting worse.
Description of the RICS HomeBuyer Service

The service

The RICS HomeBuyer Service includes:

- an inspection of the property (see ‘The inspection’);
- a report based on the inspection (see ‘The report’); and
- a valuation, which is part of the report (see ‘The valuation’).

The surveyor who provides the RICS HomeBuyer Service aims to give you professional advice to help you to:

- make an informed decision on whether to go ahead with buying the property;
- make an informed decision on what is a reasonable price to pay for the property;
- take account of any repairs or replacements the property needs; and
- consider what further advice you should take before committing to purchase the property.

The inspection

The surveyor carries out a non-disruptive visual inspection externally from ground level and internally from floor level. The surveyor inspects roofs, chimneys, and other parts of the building. The surveyor also inspects the roof space from inside the roof space. The surveyor also visually inspects the roof space where there is safe and reasonable access, normally defined as being from a 3-metre ladder within the property. If this is not possible, the surveyor will use other means to access the roof space. If the surveyor does not open fixed hatches, or move or lift insulation material, stored goods or other contents.

The surveyor inspects floor surfaces and, where possible, sub-floor areas. These are inspected only to the extent that damage is readily apparent and must be easy to access. The surveyor will not carry out any work to put right defects or make recommendations on how these repairs should be carried out. No maintenance and repairs the surveyor suggests may be expensive. Other matters may be reported where the surveyor judges this to be helpful and constructive.

Services to the property

Services are generally hidden within the construction of the property. This means that only the visible parts of the available services can be inspected, and the surveyor does not carry out specialist tests. The visual inspection cannot assess the efficiency or safety of electrical, gas or other energy sources, plumbing, heating or drainage installations (or whether they meet current regulations), or the installation condition of any chimney, boiler or other fuel.

Outside the property

The surveyor inspects the condition of boundary walls, fences, permanent outbuildings and any common services in use. To inspect these areas, the surveyor walks around the grounds and any neighboring public property where access can be obtained. Buildings with swimming pools and sports facilities are also treated as permanent outbuildings, but the surveyor does not report on the leisure facilities, such as the pool itself and its equipment, landscaping and other facilities (for example, tennis courts and temporary outbuildings).

Flats

When inspecting flats, the surveyor assesses the general condition of outside surfaces of the building, as well as its access areas (for example, shared hallways and staircases). The surveyor inspects roof spaces, or the communal roof space of flats, using a 3 metre ladder only if there is safe and reasonable access after considering health and safety guidance. The surveyor does not inspect drains, lift, fire alarms and security systems.

Dangerous materials, contamination and environmental issues

The surveyor does not make any enquiries about contamination or other environmental hazards. However, if the surveyor suspects a problem, he or she will record this and advise further investigation.

The surveyor may assume that any harmful or dangerous materials have been used in the construction, and does not have to justify making this assumption. However, if the report contains any materials that have been used, the surveyor must report this and ask for further instructions.

The surveyor does not carry out an asbestos inspection and does not act as an asbestos inspector when inspecting properties that may be used within the Control of Asbestos Regulations 2000. With these assumptions, the surveyor assumes that there is a ‘buyers’ risk’ (as defined in the regulations). But if in doubt, an asbestos tester and an effective management plan which does not present a significant risk to health or need an immediate payment. The surveyor does not consider the buyers’ risk.

The report

The report provides a report of the inspection for you to use, but cannot accept any liability if it is used by anyone else. If you decide not to act on the advice in the report, you do this at your own risk. The report focuses on matters that, in the surveyor’s opinion, may affect the value of the property if they are not addressed.

The report is in standard format and includes the following sections:

A. Introduction to the report
B. About the inspection
C. Overall opinion and summary of the condition ratings
D. About the property
E. Outside the property
F. Inside the property
G. Services
H. Grounds (including shared areas for flats)
I. Issues for your legal advisers
J. Risks
K. Valuation
L. Surveyor’s declaration
What to do now

Description of the RICS HomeBuyer Service

Typical house diagram

Condition ratings

The surveyor gives condition ratings to the main parts (the elements) of the main building, garage and some outside elements. The condition ratings are described as follows:

Condition rating 1 – there is no repair or correction necessary.
Condition rating 2 – defects that need minor repair or minor outbuilding, which requires replacement or minor repair. The property must be maintained in the normal way.
Condition rating 3 – defects that are serious and/or need to be repaired, replaced or investigated urgently.
Condition rating 4 – defects that need repairing or replacing but are not considered to be either serious or urgent. The property must be maintained in the normal way.
Condition rating 5 – condition ratings not applicable.

RICS

HomeBuyer
Report...
Description (continued)

The surveyor notes in the report if it was not possible to check any parts of the property that the inspection would normally cover. If the surveyor is concerned about these parts, the report tells you about any further investigations that are needed.

Issues for legal advisers

The surveyor does not report on the cost of any work to put right defects or make recommendations on how these repairs should be carried out. However, there is general advice in the ‘What to do now’ section at the end of the report.

The surveyor does not act as the ‘legal adviser’ and does not comment on any legal documents. It during the inspection, the surveyor identifies issues that your legal adviser may need to investigate further. The surveyor may refer to these in the report (for example, check whether there is a warranty covering replacement windows).

Energy

The surveyor transcribes the energy efficiency and environmental impact ratings as stated on the Energy Performance Certificate (EPC) on the home, if available. The EPC may not have been prepared by the surveyor who has prepared the report. If that is the case, then the figures stated have simply been taken from the certificate that was exhibited to the surveyor and does not in any form confirm that they are correct, nor does it attach any liability to the surveyor who has prepared this report.

Risks

The surveyor reports on property-related risks that include defects that need repairing or replacing, as well as defects that have existed for a long time and cannot reasonably be changed, but may present a risk. The surveyor reports on property-related risks or hazards that are identifiable and within the scope of the inspector.

The valuation

The surveyor gives an opinion on both the Market Value of the property and the reinstatement cost at the time of the inspection (see the ‘Reinstatement cost’ section).

Market Value

‘Market Value’ is the estimated amount for which a property should exchange on the date of the valuation between a willing buyer and a willing seller, in an arm’s length transaction after the property was properly marketed wherein the parties had acted knowledgeably, prudently and without compulsion.

When deciding on the Market Value, the surveyor also makes the following assumptions:

The materials, construction, services, fixtures and fittings, and so on

The surveyor assumes that:

- an inspection of those parts that have not yet been inspected would not identify significant defects or cause the surveyor to alter the valuation;
- no dangerous or damaging materials or building techniques have been used in the property;
- there is no contamination in or from the ground, and the ground has not been used as a landfill;
- the property is connected to, and has the right to use, the mains services mentioned in the report; and
- the valuation does not take account of any furnishings, renewable fittings and sales incentives of any description.

Legal matters

The surveyor assumes that:

- the property is sold with ‘vacant possession’ (your legal adviser can give you more information on this term);
- the condition of the property or the purpose that the property is or will be used for, does not break any laws;
- no particularly troublesome or unusual restrictions apply to the property, that the property is not affected by problems which would be revealed by the usual legal enquiries and that all necessary planning and Building Regulations permissions (including permission to make alterations) have been obtained and any works undertaken comply with such permissions; and
- the property has the right to use the mains services on normal terms, and that the sewers, mains services and roads giving access to the property have been ‘adopted’ (that is, they are under local authority, not private, control).

The surveyor reports any matters that have been made or found not to apply.

Reinstatement cost

Reinstatement cost is the cost of rebuilding an average home of the type and style inspected to its existing standard using modern materials and techniques and in line with current Building Regulations and other legal requirements.

This includes the cost of rebuilding any garage, boundary or retaining walls and permanent outbuildings, and clearing the site. It also includes professional fees, but does not include VAT (except on fees).

The reinstatement cost helps you decide on the amount of buildings insurance you will need for the property.

Standard terms of engagement

1. The service – the surveyor provides the standard RICS homebuyer service (‘the service’) described in the Description of the RICS Homebuyer Service, unless you and the surveyor agree in writing before the inspection that the surveyor will give you additional advice.

2. The surveyor – the service is to be provided by an AssociateRICS, MRCs or FRICS member of the Royal Institution of Chartered Surveyors, who has the skills, knowledge and experience to survey, value and report on the property.

3. Before the inspection – you tell the surveyor if there is already an agreed or proposed price for the property, and if you have any particular concerns (such as plans for extensions) about the property.

4. Terms of payment – you agree to pay the surveyor’s fee and any other charges agreed in writing.

5. Cancellation of contract – you agree to cancel this contract by giving notice to the surveyor’s office at any time before the day of the inspection. The surveyor does not provide the service (and reports this to you as soon as possible) if, after arriving at the property, the surveyor decides that he or she lacks enough specialist knowledge of the method of construction used to build the property.

6. Liability – the report is provided for your use. It is confidential to you and your professional advisers. The surveyor cannot accept responsibility if it is used by anyone else. Any such party relies on the report at its own risk.

Complaints handling procedure

The surveyor will have a complaints handling procedure and will give you a copy if you ask.

Note: These terms form part of the contract between you and the surveyor.

This report is for use in Scotland.
Typical house diagram

This diagram illustrates where you may find some of the building elements referred to in the report.
Part D: Appendices

The following appendices include useful aides-memoires for surveyors. Appendix E also details the terms of the RICS HomeBuyer Service Copyright Licence Scheme. Any surveyor providing this service must hold a current copyright licence.

The appendices are:

- Appendix A: Definitions of the RICS HomeBuyer Service key terms
- Appendix B: The RICS HomeBuyer Service – the checklist of professional obligations
- Appendix C: Relevant RICS guidance sources
- Appendix D: The contract – the checklist for each commission
- Appendix E: The RICS HomeBuyer Service Copyright Licence Scheme
Appendix A: Definitions of the RICS HomeBuyer Service key terms

Accessible
Those parts of the property that are visible and readily available for inspection from ground and floor levels on the basis of non-invasive inspection, without risk of causing damage to the property or injury to the surveyor (see DHS), or from a surveyor’s ladder to a height of 3 metres above ground level or a firm level and safe surface.

Additional advice
A standard service defined in the DHS, which applies unless additional advice, in the form of extra services and/or advice, is agreed in writing before the inspection (see Part A, subsection 2.5).

Condition ratings
An assessment of the condition of elements of the building, the services and any garages or permanent outbuildings, and can be any of the following:

- **Condition rating 3** – defects that are serious and/or need to be repaired, replaced or investigated urgently.
- **Condition rating 2** – defects that need repairing or replacing but are not considered to be either serious or urgent. The property must be maintained in the normal way.
- **Condition rating 1** – no repair is currently needed. The property must be maintained in the normal way.
- **NI** – not inspected.

Contract letter
A written statement to the client, which the surveyor must produce, specifying all the necessary facts and conditions (see Part A, section 3, and Appendix D).

Extra services
Information and/or advice that is outside the scope of the standard service, which can of course be provided, but requires a separate contract (see the DHS and Part A, subsection 2.6).

Inspection
A general surface examination of those parts of the property which are accessible (see the DHS). (‘Accessible’ is defined earlier in this appendix. See also Part A, subsection 2.4).

Market Value
‘The estimated amount for which a property should exchange on the date of valuation between a willing buyer and a willing seller in an arm’s-length transaction after proper marketing wherein the parties had each acted knowledgeably, prudently and without compulsion’ (IVSC, 2007). (See also DHS and section K Valuation.)

Normal maintenance
Work of a recurring nature that certain building elements routinely require in order to preserve their integrity and functionality.

Overall opinion
The surveyor’s conclusions, in brief, on whether or not the property is a reasonable proposition and on particular features that affect its current Market Value and may affect its future resale. The opinion takes no account of factors outside the scope of the HBS.

Reinstatement cost
The cost of rebuilding an average home of the type inspected to its existing standard, using modern materials and techniques and in accordance with current Building Regulations and other statutory requirements (see the DHS).

Report
The HBR, a standard format form in which the surveyor applies condition ratings to elements of the property. It focuses on matters which, in the opinion of the surveyor, need repair or replacement or may impact on the value of the property (see the DHS).
Service
The HBS, which aims to give clients considering buying a particular property the professional advice which will help them:

- make an informed decision on whether to go ahead with buying the property;
- make an informed decision on what is a reasonable price to pay for the property;
- take account of any repairs or replacements the property needs; and
- consider what further advice the clients should take before committing to purchase the property.

The HBS therefore covers the general condition of the property and particular features which affect its present value and may affect its future resale (see the DHS).

Serious defects
Those defects which compromise the structural integrity of the property and/or impair the intended function of the building element.

Urgent defects
Defects which, if not repaired/remedied immediately, will cause structural failure or serious defects in other building elements and/or present a safety threat.

Valuation
The surveyor’s opinion of both the Market Value of the property and the reinstatement cost (see DHS).

</table>
Appendix C: Relevant RICS guidance sources

Part A, subsection 1.1, in the PN requires that surveyors accepting instructions under the HBS must fulfil such commissions in full compliance with all directly available material published by RICS. By way of example this includes the following.

**Practice statements and notes**

Under RICS Bye-law 19(5) and Conduct Regulation 5 it is the duty of every member to comply with the contents of RICS practice statements in the interest of maintaining the highest professional standards.

In addition, practice statements are relevant to professional competence in that each surveyor should be up to date and should have informed him or herself of practice statements within a reasonable time of their promulgation. Practice statements and notes are available as part of a subscription to isurv and can also be purchased from RICS.

**Mandatory practice standards** are the highest category of technical information produced by RICS. They are obligatory for all RICS members to follow when providing a service covered by such a standard.

These are often collectively referred to as practice statements, though there are some other instances of mandatory status standards which you will need to be aware of. More information about RICS guidance relevant to the HBR can be found at www.rics.org/homesurveys.

1. Before preparing and submitting the contract to the client:
   
   (a) the surveyor needs to be satisfied that the HBS is appropriate:
   
      (i) for the client’s requirements;
      (ii) for the property itself; and

   (b) the surveyor must ensure that the client is given full opportunity as soon as possible to study the key standard documents (see Part A, subsection 3.1), which are:

      (i) DHS;
      (ii) STE (within the DHS); and
      (iii) where applicable, details of the types of properties for which the surveyor is not prepared to provide the service.

2. The surveyor then composes the contract, incorporating:

   (a) the name and address of the client, and the address of the property to be inspected;
   (b) the agreed price (if any) for the property;
   (c) the purpose of the valuation and the legal interest being valued;
   (d) a statement confirming what will be the date of the valuation (day/month/year) and the full title of the current edition of the Red Book that will apply;
   (e) any limits or exclusions of liability to others than the identified;
   (f) the proposed charge for the service, plus any exceptional charges to be incurred, together with the terms of payment;
   (g) a statement explaining that:

      (i) these charges will need to be revised if it is found, on arrival at the property, that it differs substantially from the description previously given to the surveyor; or
      (ii) it is outside the surveyor’s experience;
   (h) a statement that the surveyor will not report until the signed ‘instructions to proceed’ have been received (see Part A, subsection 3.3);
   (i) a statement that the RICS may, for administrative purposes, check the report for compliance with the Red Book;
   (j) disclosure of any material involvement or conflicting interest, or a statement that none exists; and
   (k) an agreement that the nature and source of any third party information that the client has requested is to be relied upon in the report.

   The surveyor is reminded that the ‘mandatory’ requirements of terms of engagement relating to valuations covered by the current edition of the Red Book apply to this service, and all details must be agreed with the client prior to the release of the report.

3. Where applicable, the only other matter to be specified in the contract is any agreed additional advice (see Part A, subsection 2.5).
Appendix E: The RICS HomeBuyer Service
Copyright Licence Scheme

The RICS HomeBuyer Service (HBS) is a product developed and owned by RICS. Only AssocRICS, MRICS or FRICS members of RICS, in compliance with UKPS 4.1 of the Red Book and this PN, may apply for a copyright licence to deliver the HBS.

Surveyors will, on request, be required to provide copies of their format to RICS. For more information on delivery options, please visit www.rics.org/homesurveys.

An individual, a firm or a company wishing to reproduce the HBR must purchase a copyright licence, which authorises the licensee to reproduce the service material for use in Scotland. The material (DHS and STE within the DHS) embraces the current report headings and descriptions, forms and documents provided to potential clients.

RICS recommends that reports should be presented to the client in the official RICS Home Surveys folder, which can be ordered via the copyright licence application form or online at www.ricsbooks.com.

The copyright licence fee is payable a year in advance. For more details please see its terms and conditions (reproduced on page 71–72 of this PN) or contact Customer Services on +44 (0)870 333 1600 (option 2).

The copyright licence scheme is available exclusively for RICS members. Anyone delivering the HBS without a current copyright licence would be in breach of RICS copyright.
Copyright Licence Scheme

Introduction
The RICS HomeBuyer Report (HBR) Copyright Licensing Scheme permits members of RICS to reproduce specified HBR documents. The scheme comprises five documents.

• RICS HomeBuyer Report form, or RICS HomeBuyer Report form (Scotland)
• Description of the RICS HomeBuyer Service with Standard terms of engagement, or Description of the RICS HomeBuyer Service with Standard terms of engagement (Scotland)
• RICS Leasehold properties advice
• RICS Choosing between surveys
• RICS Maintenance tips

The Copyright Licensing Scheme is administered by RICS.

Points to note
1) The full terms and conditions of the Copyright Licensing Scheme appear overleaf followed by a licence application form and a scale of charges.

2) The licence runs until 31 December 2011.

3) Any licence fee is payable in advance.

4) You will receive a renewal notice in advance of your licence expiry, together with details of any revisions to the fee.

5) Copyright of all HBR material must be acknowledged as belonging to RICS, and the following statement therefore will appear on each of your reports:

"The RICS HomeBuyer Report is reproduced with the permission of the Royal Institution of Chartered Surveyors which owns the copyright."

6) RICS recommends that your report should be presented to the client in the official RICS Home Surveys presentation folder. For details of how to order see the application form enclosed.

7) It is essential that the current edition of the wording is used consistently, and without alteration, throughout when reproducing the HBR copyright material and each document, when used, must be reproduced in its entirety.

8) To ensure compliance with the terms and conditions of the scheme you will, on request, be required to provide us with copies of recent reports.

*These items are also available from RICS. Please visit www.ricsbooks.com

Copyright Licence Agreement

The following material is the text of the Copyright Licence Agreement but not the Licence itself.

THIS LICENCE is granted to the named person, firm or company (‘the Licensee’) by RICS, Surveyor Court, Westwood Way, Coventry, CV6 8JE (‘the Licensor’) on the following terms and conditions.

Interpretation

1.1 In this Licence, unless the context otherwise requires, the following expressions shall have the following meanings:

‘RICS’ means The Royal Institution of Chartered Surveyors.
the ‘Intellectual Property Rights’ (the IP) means all intellectual property rights, including without limitation: patents, registered designs, trade marks and service marks (whether registered or not), copyright, database rights, design rights and all similar property rights and applications for protection of any of the above rights.
the ‘Material’ means the Report Headings and Descriptions of the edition for the time being in force of the RICS HomeBuyer Report; RICS HomeBuyer Report (Scotland); RICS Description of the RICS HomeBuyer Service with Standard terms of engagement; RICS Description of the RICS HomeBuyer Service with Standard terms of engagement (Scotland); RICS Leasehold properties advice; RICS Choosing between surveys; and RICS Maintenance tips; the ‘Territory’ means England, Wales, Scotland, Northern Ireland, the Channel Islands and the Isle of Man; the ‘Fee(s)’ means the Fees payable in accordance with the scale of charges for the time being in force issued by the Licensor.

1.2 The headings in this Licence are only inserted for convenience and do not affect its construction.

1.3 Where appropriate words denoting a singular number only shall include the plural and vice versa.

1.4 Reference to any statute or statutory provision includes any amendments, consolidations or reenactments as made from time to time whether made before or after the date of this Licence.

Authorisation

2.1 The Licensee is hereby authorised to reproduce the Material on the terms and conditions of this Licence.

2.2 The Licensee shall ensure that the current edition of the Material is used consistently and without alteration and that all Material is reproduced in its entirety and validated by RICS.

2.3 The Licensee shall accurately display all title, trademark and copyright notices of the Licensor where the Material is copied, distributed, displayed, reproduced, transmitted or otherwise.

2.4 The following paragraph will appear on all copies of the Material:

“The RICS HomeBuyer Report is reproduced with the permission of the Royal Institution of Chartered Surveyors which owns the copyright.”

2.5 The Licensee shall display a validation number and an agreed disclaimer on behalf of the Licensor, if so requested by the Licensor, where the Material is copied, distributed, displayed, reproduced, transmitted or otherwise.

2.6 The Licensee may at any time and from time to time request copies of the Licensee’s reproduction of the Material to ensure compliance by the Licensee with the terms and conditions of the Licence.

2.7 The Licensee will notify the Licensor of any change of name and address and if the number of RICS members covered by the Licence should increase within one month of the change taking effect.

 Territory

3. The Licensee is only authorised to distribute the Material in the Territory.

Duration

4. The Licence shall continue until 31 December 2011.

Fee(s)

5.1 The Fee is payable in advance (plus VAT at the rate in force from time to time) of the start date specified by the Licensor on application.

5.2 The Fee may be increased or varied from time to time by the Licensor. At least thirty (30) days written notice of any increase will be given to the Licensee.

No refunds or rebates of Fees will be given.

Termination

6.1 This Licence shall automatically determine in any of the following circumstances:

6.1.1 if there shall be a breach or non-observance by the Licensee of any of the terms herein including (but without prejudice to the generality of the foregoing) failure to pay the Fee(s) by the due date;

6.1.2 if the Licensee ceases to be a Member of RICS for any reason;

6.1.3 on the death or bankruptcy of the Licensee:
Copyright Licence Agreement

0.1.4 If the Licensee is unable to pay its debts or enters into compulsory or voluntary liquidation or compounds with or convenes a meeting of its creditors or has a receiver appointed of its assets or ceases for any reason to carry on business or takes or suffers any similar action;

0.1.5 where the Licensee is a firm or company, where there is a material change in ownership or control.

6.2 The Licensor may at any time terminate this Licence on giving at least four (4) weeks written notice of such determination to the Licensee.

6.3 Upon the lawful and proper termination of this Licence for any reason, the Licensee shall:

6.3.1 immediately pay to the Licensor the full amount of all monies due to it under this Licence;

6.3.2 return to the Licensor all Material (in whatever form) in its possession, custody or control (whether or not supplied by the Licensor) and shall not retain any copies of the same;

6.3.3 immediately cease any form of promotion containing the Material.

Revisions to Material
7. The Licensee will give notice of any change made to the Material by the Licensor. The Licensee is required to implement such changes to the Material within three (3) months of the date on which they take effect or in accordance with any recommendation issued by the Licensor.

General
8.1 The Licensee and the Licensee shall each be independent data controllers of any personal data contained within data in their possession. The Licensee warrants that it shall comply with all applicable Data Protection Legislation as it impacts upon the Licensee’s rights and obligations under this Licence.

8.2 This Licence does not confer and shall not be deemed to confer upon the Licensee any right or interest whatsoever to the copyright in the Material which is vested in the Licensor.

8.3 The Licensee shall at all times retain ownership of the IP in the Material or otherwise. The Licensee hereby expressly acknowledges the Licensee’s ownership of its IP and will do nothing inconsistent with such ownership and agrees not to use or permit to be used by any person under its control such IP without the prior written consent of the Licensor.

8.4 All rights and licenses not specifically and expressly granted to and conferred upon the Licensee by this Licence are for all purposes reserved to the Licensor.

6.5 This Licence is purely personal to the Licensee for use by the RICS member employees only of the Licensee who shall not assign or transfer the same or sublicence or authorise any other person, firm or company, to exercise the rights hereby granted.

6.6 The Licensee shall not at any time pledge the credit of the Licensor, nor act as agent, partner, employee or representative of the Licensor and shall not hold itself out as such nor as having the power or authority to incur any obligation of any nature express or implied or behalf of the Licensor and nothing in this Licence shall operate so as to constitute the Licensee as an agent, partner, employee or representative of either the Licensor or vice versa and nor shall this Licence be construed as a joint venture.

8.7 No term of this Licence is enforceable under the Contracts (Rights of Third Parties) Act 1999 by a person who is not a party to this Licence agreement.

8.8 If a term or provision of this Licence shall be held to be illegal, invalid or unenforceable it shall to that extent be deemed not to form part of this Licence, but the enforceability of the remainder of this Licence shall not be affected.

8.9 This Licence constitutes the entire agreement between the parties about the subject matter of this Licence and in relation to such subject matter, supersedes all earlier discussions, understandings and agreements between any of the parties and all earlier representations by any party.

8.10 No variation or waiver of any of the provisions of this Licence shall be binding unless in writing and signed by a duly authorised director or employee of the Licensor and the Licensee.

8.11 No failure or delay by either party in enforcing the provisions of this Licence shall prejudice or restrict the rights and remedies of that party nor shall any waiver of its rights or remedies operate as a waiver of any subsequent or other breach.

Jurisdiction
9. This Licence shall be subject to and construed in accordance with English Law.
Copyright Licence Application Form

To apply for a Copyright Licence Agreement, please use this form. On acceptance your licence, bearing your name and licence number will be sent to you.

NB: To join the copyright license scheme you must complete all details requested on this form. Failure to do so may result in your application being rejected.

☐ I/we wish to apply for a licence enabling me/us to reproduce the RICS HomeBuyer material in accordance with the Terms and Conditions of the scheme, a copy of which has been supplied to me/us.

☐ Please state the number of RICS members delivering the RICS HomeBuyer Report that you wish your licence to cover (up to 20 RICS members).

Practitioners with 21 or more surveyors producing RICS HBRs are requested to contact customer service on +44 (0)870 333 1600 (select option 2) or email licence@rics.org for payment details.

☐ The RICS Condition Report service launches in early 2011. If you are interested in producing the Condition Report, mark this box.

For details of eligibility for delivering the RICS HomeBuyer Service, please refer to the RICS HomeBuyer Service practice note: England, Wales, Northern Ireland, Channel Islands and Isle of Man (4th edition, item code: 18818), or the RICS HomeBuyer Service practice note: Scotland (1st edition, item code: 18820).

Please indicate which of the following software solutions you use, or intend to use, to produce HBRs:

☐ RICS Survey Writer  ☐ RICS HomeBuyer Report isurv pro-form

Other supplier (please name)

Fee £ (see scale of charges on the last page)

RICS Home Surveys presentation folders

Price: £35.00 + VAT (pack of 10)

1. The first column shows the number of RICS members you are registering to deliver the RICS HomeBuyer Report (HBR).
2. The licence year runs from 1 January to 31 December each year.
3. We will notify you annually with details of any revised fees, in advance of your licence expiry date.
4. VAT at the current standard rate must be added to the figures shown in the scale of charges.
5. Applicants from practices with 21 or more surveyors delivering RICS HBRs should contact customer service for payment details.
6. Should you leave the scheme and then reapply to join within two years of your withdrawal, RICS Sales and Marketing reserves the right to apply an additional minimum charge of £50 to your first payment.

**Special Note**

The RICS HBR documents and accessories are for use exclusively by members of RICS. Use by anybody else would be a breach of copyright and is forbidden.
Reflecting changes in the home buying and selling process, and feedback from consumers and members, the RICS HomeBuyer Service 2009 has been updated and RICS HomeBuyer Report (HBR) for 2010 is now available. This practice note will give you all the practical guidance you need to deliver the new HBR.

The HBR is a client-facing product designed to extend fee-earning opportunities for surveyors. This edition of the practice note applies to Scotland, while a separate version applies, and is available, for England, Wales, Northern Ireland, Channel Islands and Isle of Man.

Central to the report are colour coded condition ratings. These rankings are an established feature in property condition surveys. It is vital that members are confident with the principles of applying condition ratings to a property, including how to accommodate ‘serious and/or urgent defects’, ‘further investigation’ and ‘normal maintenance’. Members must also be able to identify ‘Risks’ and report them in an appropriate manner. This practice note will explain these principles, along with your professional obligations and practice requirements under the new scheme.

A copy of the new HBR format is included with the practice note, along with the supporting documents for the scheme: ‘Description of the RICS HomeBuyer Service (Scotland)’, which includes the ‘standard terms of engagement’, and Maintenance tips.

Coverage includes:
- Professional obligations
- Requirements and scope of the service
- The contract
- Compiling the report
- The documentation
- The report form
- Checklists
- Definitions of key terms.

For regularly updated information about all RICS Home Surveys products, please visit www.rics.org/homesurveys.
